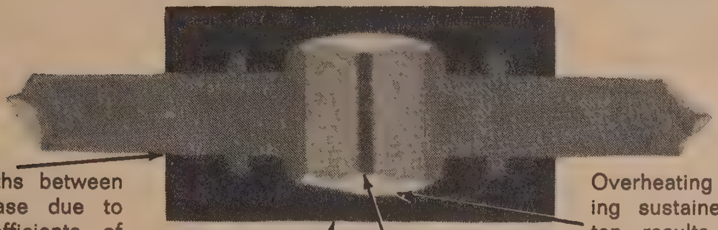
27 seconds from now you'll know whose rectifiers or zeners you want to use . . . and why

This is an actual section of a conventional plastic diode



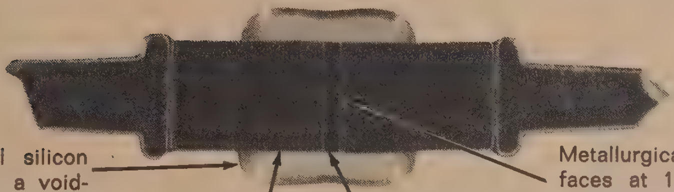
Possible moisture paths between leads and plastic case due to unequal thermal coefficients of expansion and shrinkage of plastic from leads during cure.

Overheating of silicone rubber during sustained power overload often results in long-term leakage degradation.

Relative porosity of plastic allows penetration of moisture over extended period, creating possible electrical degradation.

Usually not controlled avalanche. Conventional passivation by oxides, varnish, or silicone rubber (as shown) allows possibility of surface leakage degradation.

This is an actual section of a Unitrode glass diode



Hard glass fused to all silicon and pin surfaces creates a voidless monolithic structure. Perfect seal against all moisture and contaminants.

Metallurgical bond of pins to die-faces at 1000°C allows extremely high surge capability, low thermal resistance. Virtually indestructible construction.

Temperature coefficient of glass and pins is matched to silicon. No degradation under severe thermal stress of high transients or repeated temperature shock — even from −195°C to +300°C.

Controlled avalanche and permanently stable surface leakage characteristics. Hyperclean silicon surface fused only in hard glass. No oxides, silicones, or varnish are used.

And by the way . . .

Glass doesn't always cost more than plastic. Not when you get the economies of making 250 thousand at a time. So don't be shocked at how low our prices are. And . . . you can buy a 100 thousand right off the shelf.

Dividers Voltage

Fluke offers three different dividers. Model 720A Decade Voltage Divider is a primary ratio standard for the standards laboratory. Absolute linearity is ±0.1 ppm. TC is ±0.1 ppm/°C. Input resistance is 100 K ohms ±0.005% at 1.0 input and 1.1 input. Resolution is 0.1 ppm. Max input is 1100 volts and 11 watts. Price is $1195.

Model 725A Kelvin Varley Voltage Divider is a precision resistive device designed for use in calibration systems and test consoles where the higher accuracy of the Model 720A is not justified. The Model 725A offers 1 ppm resolution, 5 ppm linearity. Stability is 2 ppm/year and 1 ppm/°C TC. Price is $390.

Model 750A Reference Voltage Divider is an extremely accurate and stable reference voltage divider for calibration of DC voltmeters, volt boxes, DC calibrators and other precision devices. Ratio accuracy is ±(0.001% of output +0.5 μv) for one year. Switched input taps range from 1100 volts to 1.1 volts and switched output taps from 1100 volts to 0.1 volts. Price is $995.

For complete information, write Fluke, P.O. Box 7428, Seattle, Wash. 98133.

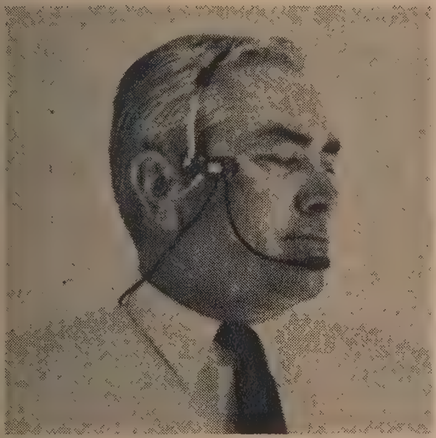
The Lightweight Headset... For Modern Communications

Now Preferred For:

- * Office Use
- * Space Communications
- * Telephone Switchboards
- * Aviation and Mobile Communications



When designing equipment that calls for headsets, specify PPI—and you'll be getting the finest headset on the market today. Each unit combines light weight (2 oz.), space-age design, comfort and reliability — and comes with a patented acoustic transfer tube which delivers distortion-free voice transmission year after year.

For high-noise-level operations, PPI provides, at a few dollars extra, a background noise-suppressor which effectively eliminates background sounds. The suppressor easily slips on and off PPI's standard acoustic tube.

Standard models for most applications are in stock and available. We also design units to mate with custom OEM equipment. (Motorola uses the PPI headset as a standard accessory item, and NASA turns to PPI for the bulk of its headset needs.)

Although you design the finest communications equipment — remember, its output can be no better than its input. Go with the input leader — PPI.

For the engineer who refuses to stagnate

HALF THE WORLD is half asleep! Men who could be making twice their present salaries are coasting along, hoping for promotions but doing nothing to bring themselves forcefully to the attention of management.

They're wasting the most fruitful years of their business lives...throwing away thousands of dollars they may never be able to make up. And, oddly enough, they don't realize—even remotely—the tragic consequences of their failure to forge ahead while time is still on their side.

Engineers, and other technically-trained men, are particularly prone to "drift with the tide" because their starting salaries are reasonably high, and promotions come at regular intervals early in their careers. It isn't until later—too much later in many cases—that they discover there are definite ceilings on their incomes.

Send for your free copy of "Forging Ahead in Business"

If you want to discover how to succeed while you are still young—if you want to avoid the heartbreak of failure in later years—send today for *"Forging Ahead in Business"*...one of the most practical and realistic booklets ever written on the problems of personal advancement.

"Forging Ahead in Business" was written for ambitious men who seriously want to get to bedrock in their thinking about their business future. If you feel it is meant for you, simply fill in and return this coupon. Your complimentary copy will be mailed to you promptly.

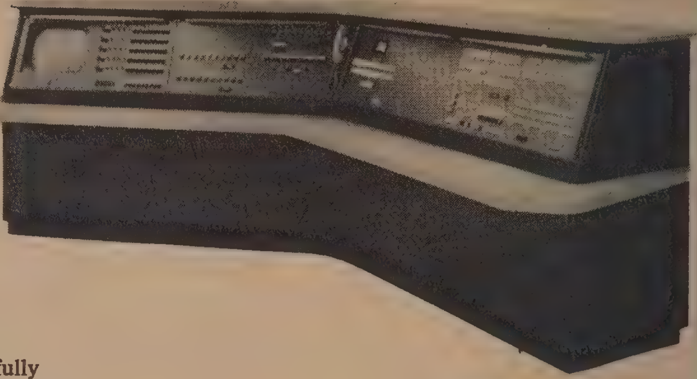
Amco has a complete line of standard or styled enclosure systems...

Standard Amco Enclosure Lines . . .

fast delivery!

styling!

Custom enclosures have non-structural exteriors that permit units up to five frames wide to have a one-piece, single unit appearance.



strength!

Semi-Custom enclosures are fully gusseted for superior strength and conformance to Mil-E-5772C shock and vibration requirements.

versatility!

FJ enclosures offer economy, versatility and off-the-shelf delivery for a wide variety of applications. These units are ideally suited for back-up equipment where conformance to rigid environmental specifications is not required.

E. M. I.!

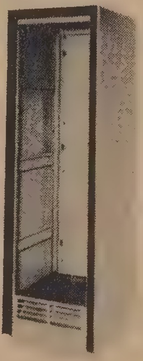
E.M.I. enclosures provide complete radiation protection in excess of E.M.I. MIL-STD 285. Amco pioneered modular E.M.I. enclosures and offer the most complete line.

economy!

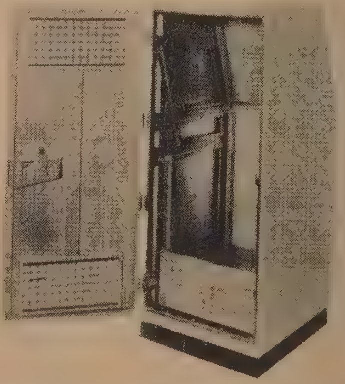
Heavy-duty aluminum enclosure system that you can assemble from a wide variety of corner castings, extruded square tubing and panels. Special locking clips eliminate the need for assembly tools. Continuous sections from 6 in. to 20 ft. with angles or slopes to 90° are possible.

Styled Aluminum Enclosure

Styled FJ Enclosure



Styled E.M.I. Enclosure



Before and after styling. Just an example of Amco's design approach for unique identification. Both the enclosures and styling are modular which permits a complete range of design possibilities to meet the most stringent structural needs or the most unique styling moods.

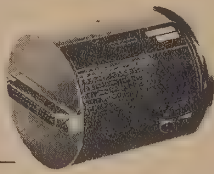
OPTICAL



OPTECON has been value engineered to provide the highest performance per dollar ratio. It makes use of a single long-life lamp which operates from a single power supply, in conjunction with precision mask, optical disc, and push-pull photo transistors to digitize rotary motion into high level quadrature square waves, convertible by means of pulse-level logic (optionally available within the package) into pulses 1, 2, or 4 times the number of cycles per turn. Reference pulse output may be provided as well. Size 25 units are available as stock items in resolutions of 250, 360, 500, 512, and 635 cycles per turn, or, on special order, any number up to 2540.

FEATURES
\$195 Base Price Only One Power Level Needed (+ or -) Fully Integral Circuitry (Square Wave, Pulse, Zero) Only One Long-life Lamp Used Rugged, All Metal Construction Highest Pulse Rate (to 1 MC) Low Impedance Signal Source

PHOTOSYN is a high precision optical encoder available with incremental (PI) or absolute (PA) readout, with increment or electronic sampling at rates up to 1 mc/second.
Designed for the measurement of rotary (or linear) motion, the encoder is available in various standard coded formats—BCD, Binary, Gray, Trigonometric, as well as special codes as required. PHOTOSYN offers high reliability and long life in a sturdy, servo-type package and may be fully militarized. DC lamp life should exceed 200,000 hours. Outputs are in parallel (absolute) or serial pulse trains (incremental).

MAGNETIC

VERNISYN is a high precision, magnetic, non-contact shaft encoder. Full-scale vernier and complete-perimeter pickoff averaging provide an extremely high resoultion and accuracy-to-size ratio. Available in various absolute (or incremental) models, the VERNISYN technique offers high reliability and long life in a sturdy, compact servo-type package. Basic transducer output is in serial sample form, but readout, which may track continuously, may be in parallel binary or BCD format, or as required.

INCRESYN magnetic incremental shaft encoders, especially designed for digital control and readout. Their wide range of resolution allows direct conversion of shaft position to final readout format. The high-signal, magnetic pickoff technique and integral silicon circuits used in the INCRESYN guarantee low noise susceptibility, high reliability, long life and low power, while eliminating such typical encoder problems as brush wear, lamp burnout and instability.

ROTOSYN, a compact, absolute magnetic non-contact shaft position encoder, provides a serial pulse train output wherein the total count of pulses in each burst directly corresponds to the shaft position. Thus each pulse represents 1/nth of a circle. The serial pulse output lends itself to direct digital recording or transmission, and the sampled answer may be indicated in a simple gated counter. A dual shaft version will provide velocity and absolute direction information as applied, for example, to wind and water digitizing. The ROTOSYN features high reliability, long life, low noise susceptibility, and low power requirements.

ROTOTRAN is a rotatable inductive coupling device (a rotary transformer) used to transfer electrical signals or power from the rotating to the stationary member of an assembly without sliding contact as necessary for slip-rings. As a result ROTOTRAN offers important advantages where long life, high reliability, high speed adverse environment, low torque, noise or crosstalk are primary considerations.

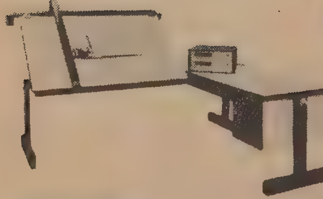
MODULAR BI-DIRECTIONAL COUNTER: Uses all-silicon or IC plug-in circuit cards. Originally developed as an expandable INCRESYN readout, combines optimum flexibility, readability and performance. The basic 50-KHz counter which provides in-line numerical display, zero reset, and 12V supply, is adequate for most readout needs. Options include 500-KHz and 5-MHz count rate, preset reset, preset output gates, BCD or 10-line output per decade, time base, and many others. Basic counters are available in 3- to 7-decade single and multi-axis models, in self-contained cabinet or rack mounting configurations.

NEW!! 5-MHz IC BI-DIRECTIONAL COUNTER: Single and multi-axis, ± and 4 to 6 decades with nixie display and BCD output. Compatible with OPTECON as well as most other reversible incremental inputs. Features all T^2L integrated circuitry. Accepts all input signal types: quadrature square wave (x1, x2, x4), pulse (up/down), or pulse/level. Available in self-contained rack-mountable cabinet (½-rack wide per axis). Base price \$895 for standard 4-decade unit plus \$100 per additional decade and ±. Detailed specifications on request.



COORDINATE DIGITIZING/PLOTTING/TAPE PREPARATION SYSTEMS

Photogrammetrics (bubble chamber projections, reconnaisance photographs, land survey) Graphical Digitizing (drawings and charts, boards, microcircuits, models and prototypes) Layouts (templates, inspection, tape preparation).

The Systems are economical, easy to maintain and allow the inclusion of a wide variety of options to suit a multiplicity of applications. Features include: non-contact encoding, plug-in T^2L IC logic cards for readout and internal equipment interface, and high precision, rapid arm traverse. Use of optical encoding coupled with precision rack and pinion provide a system of 0.001″ and 0.0005″ resolution, ±0.002″ accuracy and numerical display to 99.999 (±optional). Slewing rate is in excess of 50″ per second. Several sizes available in solid top or light table configurations.

TYPICAL SUPERFEATURES

• Interface with punch, printer, computer, teletype, etc. • Transient-free high speed transfer • Automatic optical readout trigger • Vernier positioner.

NEW!! CDP.1 COMPUTERIZED X-Y DIGITIZER-PROGRAMMER
Flexible format allows direct verifiable keyboard tape preparation readily adaptable to any N/C machine format; also continuous path programming option.

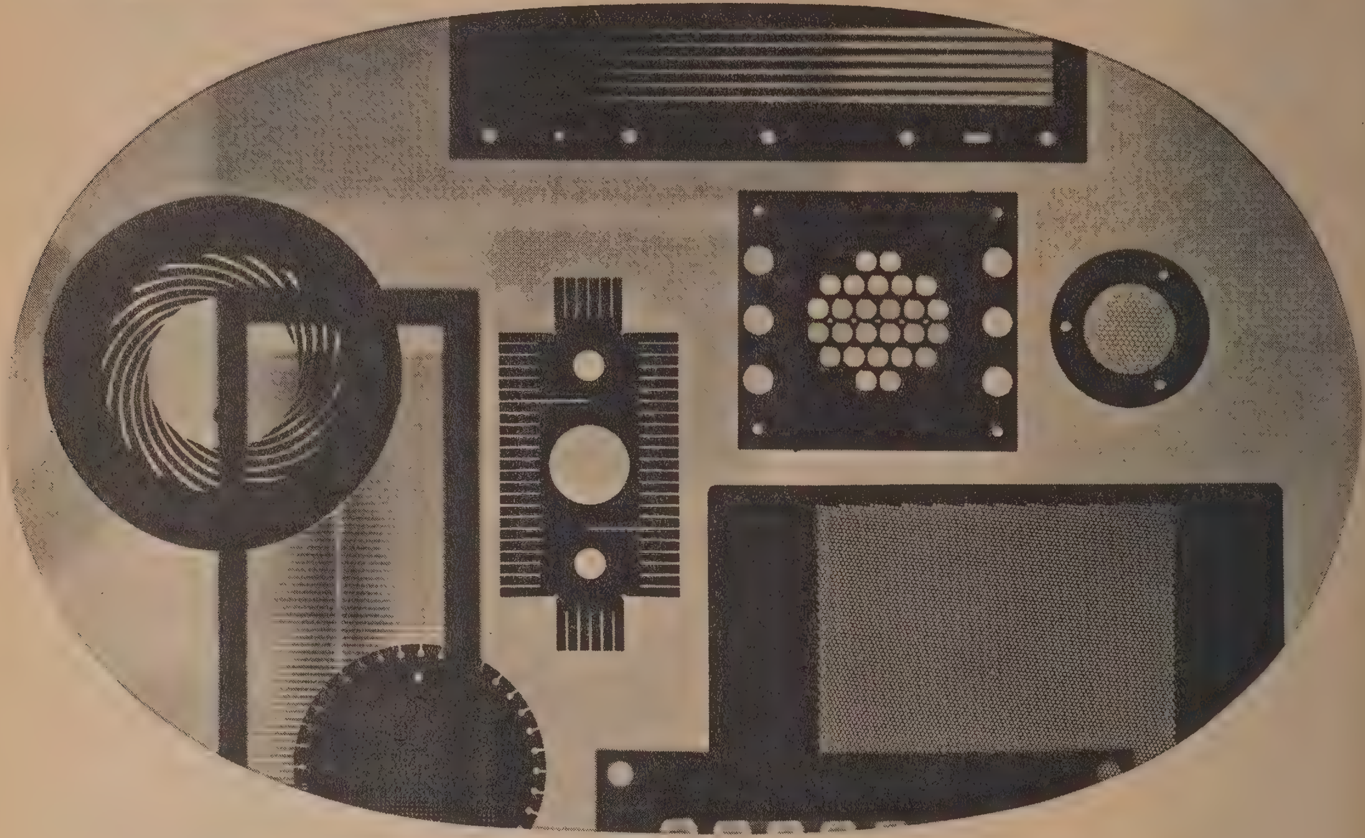
Need etched parts?



Photomechanical reproduction of precision parts is our business. We invented it!

Precision etching of metal parts on a quantity basis was developed by Buckbee-Mears during World War II. Today we're the world's largest producer of photo etched metal, glass and electroformed parts. Our new computer-directed automatic plotter is accurate to .0005" or better, and it can draw in an hour what would take a draftsman days to do. It's economical, too, because there are no costly dies to make. For precision accuracy in photo etching at computer speeds, talk to number one: Buckbee-Mears.

METAL ETCHING

Round, square, oval or straight, holes or lines etched to tolerances of ± 2 microns. Currently we are producing shaver grills, hemispheric domes, springs, micro component parts and curved surfaces too complicated for die stamping. We etch mesh, precision circuitry, core loading mats and print out rollers. More than 70 materials have been etched in our plant.

Whatever your problem or special need, Buckbee-Mears has the metal etching skill and equipment to serve you.

ELECTROFORMING

Our mesh screens go down to four million holes per square inch with accuracy. Line width tolerances of ±.0001 are common. Typical production ranges from five to 2,000 lines per linear inch. We electroform copper, nickel, silver and gold. A few standard products include evaporation masks, pin hole apertures, micro-mesh sieves, electron microscope grids, optical wedges, zone plates and a variety of microminiature parts.

What do you need? We'll solve your problem with our electroforming technology.

GLASS ETCHING

We use the same photomechanical techniques in glass etching to provide calibrations and other configurations to tolerances of ± .0001. Straight and cross line rulings, calibrated dials, concave and convex reticles, scales, prisms and encoder discs are some of the items we produce in volume.

BEAT THE PROFIT SQUEEZE WITH A STIMPSON STANDARD FASTENER

A standard fastener may differ from a special by only a few thousandths of an inch, but serves the same purpose more economically.

Standard means, the dies are already made—no need to make new ones—hence substantial savings.

Our modern, high speed production equipment drives costs down—more savings. The result—lower than ordinary cost.

Choose a standard fastener from our tremendous variety (the largest variety in the world) of Eyelets, Rivets, Grommets, Washers, Ferrules, Hole Plugs, Terminals, Snap Fasteners, Stampings, etc., and machines for attaching.

Of course, all our standards were once specials and we can make any part to your specifications.

Send today for our General Catalog, which illustrates over 1,000 standard parts.

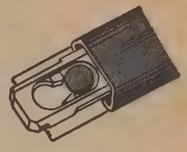
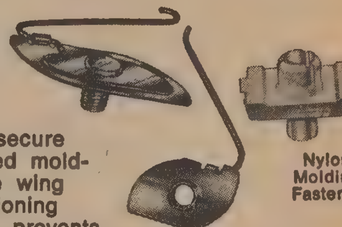
New concept for attaching fasteners eliminates holes, leakage, and corrosion. Precision-headed, speed-welded studs take a variety of standard (or custom-designed) Dot fasteners for molding, trim, other parts.



No-Hole Fastener

MOLDING FASTENERS

For speedy attachment and secure fastening of plain or tapered moldings. Spring finger or side wing types provide accurate positioning and constant tension which prevents displacement of bolt during attachment.



Side-wing Molding Fastener

Fixed-Tuned Ceramic Transfilter®

The Transfilter replaces transformer, inductive and capacitance elements used in frequency selective circuits such as i-f stages of radio receivers, discriminators, etc. It improves selectivity and long range reliability, and simplifies circuit alignment procedure. The Transfilter is easily attached to other circuit components and can be mounted by automatic assembly techniques.

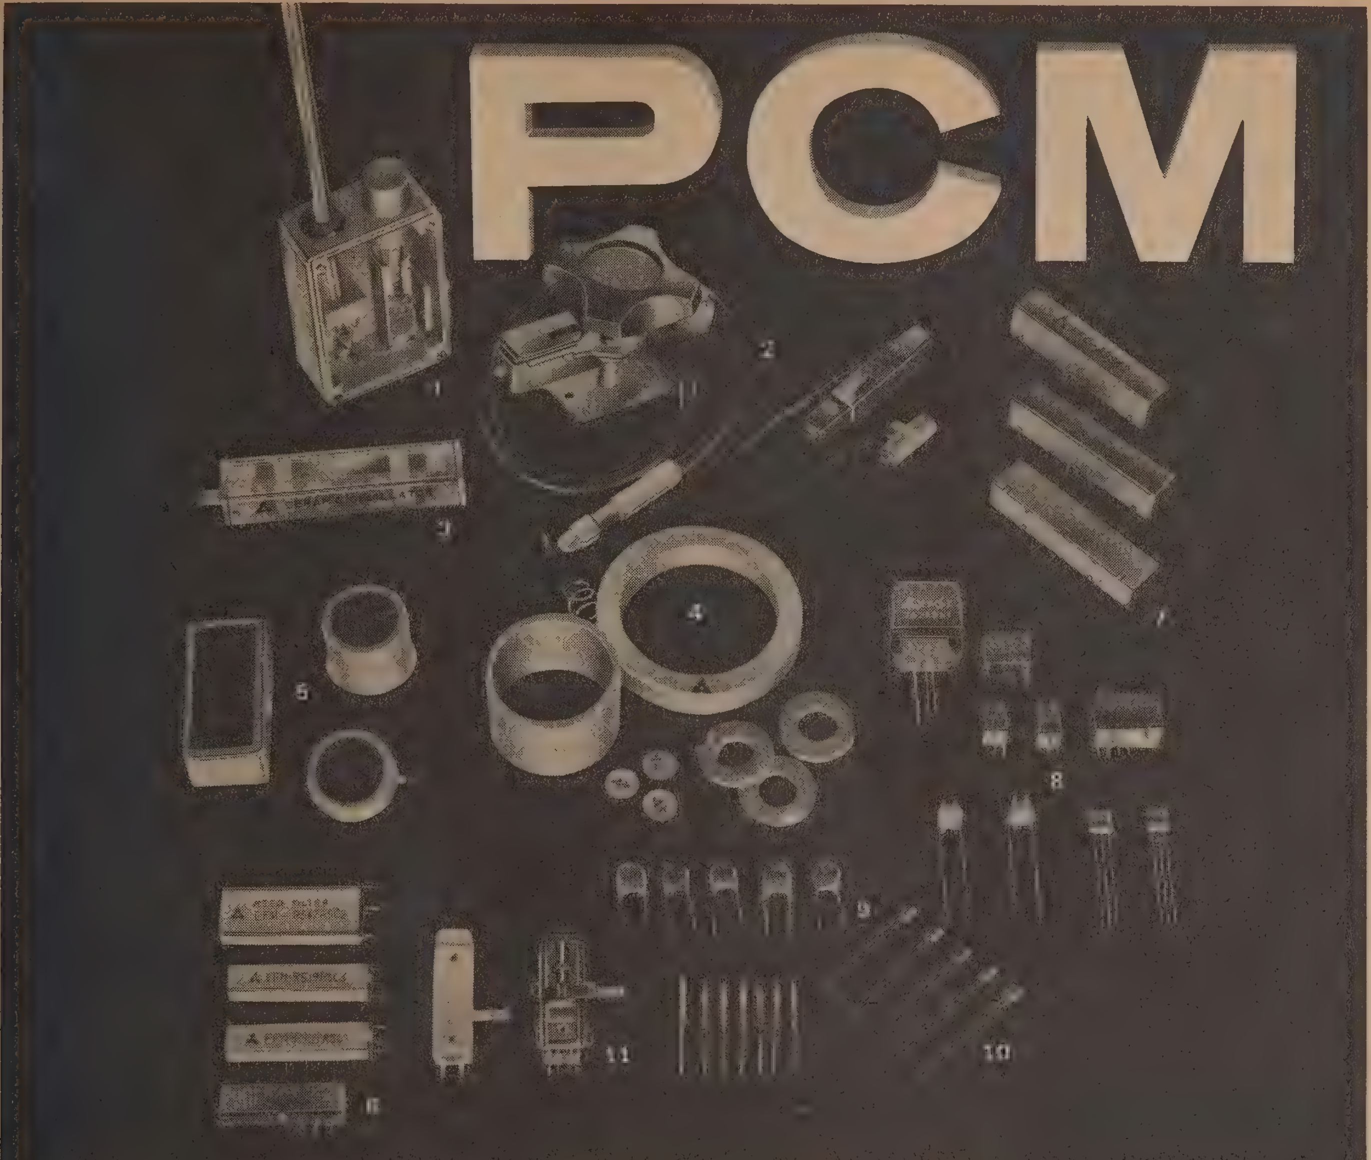
CLEVITE



PCM Ceramics provide you with the most in dielectric constant (from 300 to 5,300), the most in electro-mechanical coupling coefficient (more than 40%), the most in mechanical quality factor Qm (over 1,000), and the most in uniformity over a wide temperature range.

Matsushita makes a variety of PCM Ceramics to suit your particular needs. We have PCM with the mechanical strength and hardness to generate high voltage under sudden stress, and others with delicate acoustic sensitivity for use in microphones and cartridges.

1. Remote Controller—Utilizes noise wave from the sparking of the piezoelectric element to activate a receiver.

2. Piezo Arc®—Gas igniter—Ignition device for gas appliances and cigarette lighters. Generates up to 15KV, and features supreme reliability and durability.

3. Ceramic Oscillator—Compact transistor oscillator with divided electrode piezoelectric resonator. Useful as standard signal generator. 30-100kHz available.

4. Transducer—Various sizes and shapes are available for a multitude of different functions including detonators, etc.

5. Ultrasonic Ceramic Microphone—Can transmit as well as receive. Useful in ultrasonic controller devices, alarm systems, etc.

6. Reed Filter—Frequency Resonant Filter—Contains tuning fork and two piezoelectric transducers. Applicable as sharp selectivity audio-frequency filter or as audio tone generator replacing conventional LC filter. High Q, high selectivity, compact.

7. FM Multiplex Ceramic Filter—Stable, compact, preset—no tuning required. Eliminates need for conventional L-C parts and allows simpler circuit design.

8. Ceramic Filter—For IF stage of AM/FM radios. Hybrid type (a combination of filter and coil) and composite disc type available. 262.5kHz, 455kHz, 10.7MHz.

9. Ceramic Trap "CERAP®"—Preset, low loss. Sound frequency rejection element in TV video amplifier circuit. 4.5MHz, 5.5MHz, 6.5MHz and others available.

10. FM Discriminating Element "CERAMINATOR®"—Stable, preset, small. FM demodulation element for TV/radio receivers. 4.5MHz, 5.5MHz, 6.5MHz, 10.7MHz and others available.

11. Ceramic Cartridge—High electrostatic capacitance and fidelity characteristics.

CRYSTAL
FILTERS

Microsonics, Inc. has designed and developed phase tracking crystal filters, in which the phase between filters will track within close tolerances, over wide temperature ranges, without temperature control. Any one of the standard multi-pole filters such as Butterworth, Tchebycheff, Bessel, etc. may be obtained with phase tracking requirements. In the event of tight tracking requirements, the filters are produced in matched sets according to the customer's requirements.

The set of 3 filters shown above have been produced in production quantities and the specifications are shown below.

FILTERS

CRYSTAL FILTERS

Miniaturized crystal filters designed for use where extreme selectivity and stability must be combined with minimum volume. Under one roof are facilities for designing and producing crystal filters as well as filter crystals. This assures fabrication of highly reliable crystal filters and discriminators. (For frequency ranges which are presently practical for crystals, bandpass, bandstop, bandpass-linearphase, and single sideband filters as well as crystal discriminators are manufactured at this facility.)

*SPECIAL PHASE CHARACTERISTICS

Phase shift:

1% deviation from linearity over 6db bandwidth.
.4% deviation from linearity over 80% of the 6db bandwidth.
.15% deviation from linearity over 60% of the 6db bandwidth.

ORDERING NON-STANDARD CRYSTAL FILTERS

When specifying non-standard bandpass crystal filters for quotation requests, in addition to describing the application and any unusual environmental specifications please include the following information: Type of filter, minimum 3 db- or 6 db-bandwidth, maximum 40 db- or 60 db-bandwidth, maximum passband ripple, maximum midband insertion loss, input and output impedance, maximum case dimensions and operating temperature range.

If there is no specific requirement in a particular case, it is preferable to so state, since over-specifying filter characteristics may increase cost or complexity unnecessarily.

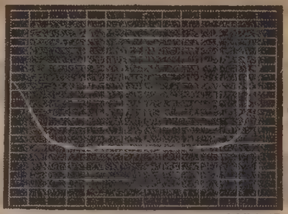
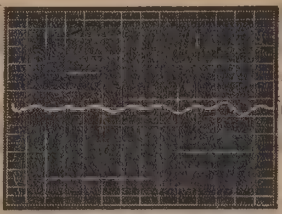
HOW KAPPA GETS CONSTANT DELAY IN *STEEP RESPONSE* FILTERS!



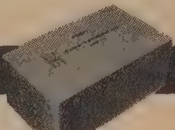
AMPLITUDE RESPONSE IN PASSBAND



PASSBAND GROUP DELAY DISTORTION

Difficult? . . . of course! . . . but
WE PROGRAMMED A GENERAL SOLUTION
in double precision **FOR** a high-speed digital computer,
to enable us to meet the demands of systems
requiring delay distortionless transmission.
ANY PREDETERMINED ENVELOPE DELAY
can now be attained
BY ITERATION OF THE POLES AND ZEROES
of a complete system with up to 50 equalizer sections.
By **ACHIEVING EQUAL RIPPLE RESPONSE** this
method outperforms any other equalization technique in minimizing
delay distortion. KAPPA design engineers
can assist you in attaining **ECONOMICALLY** an improved accuracy of
time correlation between signals in data transmission systems.

KAPPA 2211 SERIES FILTERS



(TYPE: BAND PASS)

PASS BAND RESPONSE:	
Frequency Range:	3300-6000 Hz (1 db points)
Amplitude ripple:	± 0.25 db.
Group Delay Distortion:	Less than ± 100 usec.
Insertion Loss at 4500 Hz:	Less than 2.5 db
STOP BAND RESPONSE:	Min 50 db at 3000 Hz and lower Min 50 db at 6420 Hz and higher
Impedance Range:	500-6000 ohms

If RFI is your problem, RFI is your answer. RFI? RF Interonics, Inc., leading producer of RFI/EMC filters and capacitors.

RF Interonics, Inc., with its proven record of unsurpassed technical competence, is prepared to solve your most complex RFI/EMC filter problems.

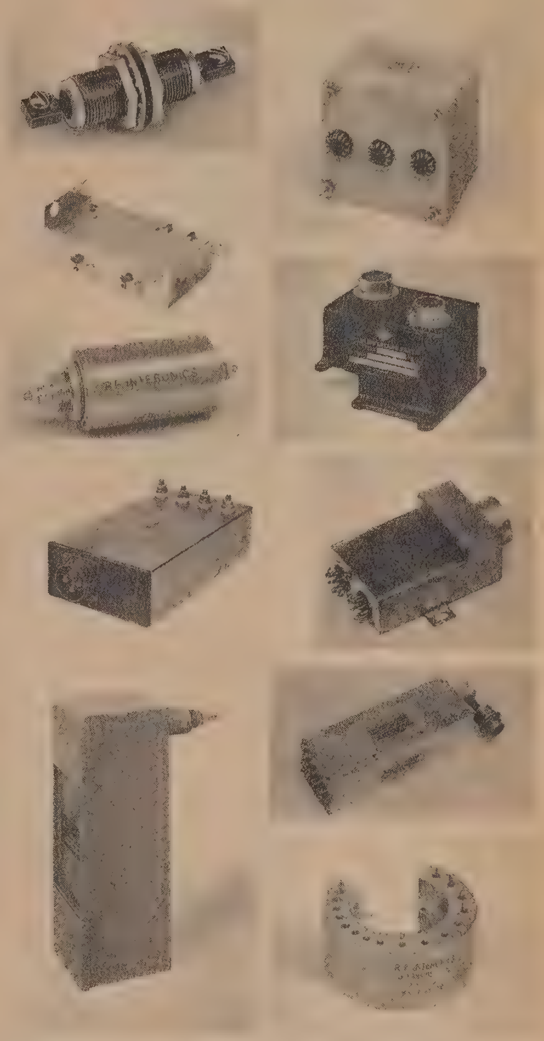
The RF Interonics facility is the most modern of its type in the country, and is industrially engineered for the efficient manufacture of high reliability radio frequency filters and capacitors. The plant is fully air conditioned and humidity controlled. Clean rooms are maintained for capacitor winding and the assembly of NASA quality filters. A complete in-house capability includes sheet metal fabrication, inductor winding, vacuum impregnation and all necessary processing and test equipment to assure adequate control and quick-reaction time.

More than 5,000 filter designs are available as standard or custom-engineered assemblies. Filters are produced with current ratings ranging from 1 milliampere to 1,500 amperes, and voltages from 0.1 volt to 20,000 volts.

All filters conform to the requirements of MIL-F-15733E. Where required, parts are produced in conformance with NASA specifications NPC 200-3 and NPC 200-4.

UNITED STATES
USA

Filters designed and built by RF Interonics are aboard Saturn V as part of the LEM Rendezvous and Landing Radar; the LEM Descent Engine; the Instrument Unit; and the S-II Second Stage. (Photo courtesy North American Rockwell)



CYLINDRICAL FILTERS. Covering a broad range of current and voltage ratings, providing high attenuation over the complete RF interference spectrum.

MULTI-CIRCUIT FILTER PACKAGES. Many circuits in one compact filter assembly. Incorporating the input connector eliminates need for a separately-shielded RF compartment.

SINGLE-CIRCUIT FILTERS. Chassis-mounted (utilizing mounting brackets), or bulkhead-mounted (through a panel that isolates filter input from output).

SHIELDED ROOM FILTERS. Easily bulkhead-mounted directly to shielded enclosures or equipment panels. Removable access covers on shielded side (often an RF leakage source) have been eliminated.

FEED-THROUGH CAPACITORS. Designed and built to exceed MIL-C-11693. Available in a wide range of current and voltage ratings, with attenuation over a broad frequency range.

Murata microfork, a unique piezoelectric tuning fork.

Murata pasted a tiny piezo ceramic on the fork to drive it piezoelectrically. As a result the Microfork provides stability in the face of bumps, jars, and changes of temperature and humidity.

Microfork Model EFM is highly accurate, compact and durable in such applications as selective calling apparatus, precise control instruments and audio frequency standards.

Nickel plated brass case is mounted on a plastic base designed for printed circuitry.

Electronic Galvanometers

Fluke solid-state electronic galvanometers include Model 841 A & B, and Models 845 AB & AR. Design features include fast response, immunity to overload damage, battery and/or AC operation, operation in any position, and solid mechanical design that will stand MIL-Spec shock and vibration.

Model 841A offers a current sensitivity of 2 × 10^{-9} ampere per scale division and power sensitivity of better than 8 × 10^{-16} watt per division. Input resistance is 180 ohms on three current ranges of ± 30 nanoamperes, and ± 3 microamperes full scale.

Model 841B differs in the following respects:

1) 5 × 10^{-9} amp/scale division sensitivity
2) 4.5 × 10^{-16} watt/scale division power sensitivity
3) Input resistance 18 ohms
4) ± 100 nanoamperes, ± 1 microamperes, and ± 10 microamperes current ranges

Price of the Model 841 A and B is $245 less power pack.

Models 845 AB & 845 AR null detector microvoltmeters are designed for extremely high input resistance, sensitivity and isolation. Price is $435 for the Model 845 AB or AR with rechargeable batteries.

PATTERN GENERATOR

The Model 819D pattern generator is a fully solid state precision instrument for testing and evaluating communications systems at speeds up to 10,000 baud. It generates a single repetitive test signal, a switch selected character of 3 to 14 information bits in any combination of MARK and SPACE (sync or Start/Stop), and an 80-character, 5-level (Baudot) code message programmed for the standard "FOX" message. A second message of up to 128 characters at 8 levels can also be provided. An external timing input enables character-by-character transmission of the selected format as well as bit synchronization. Individual character transmission can be controlled manually.

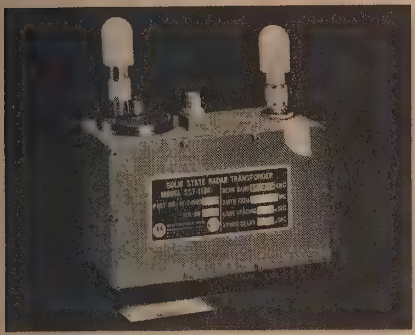
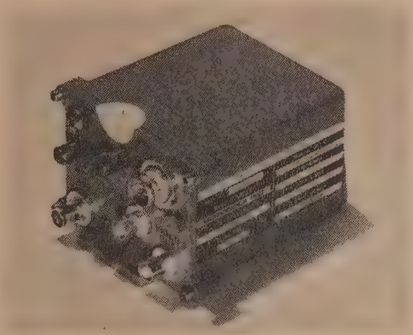
The World's Finest Tracking Transponders

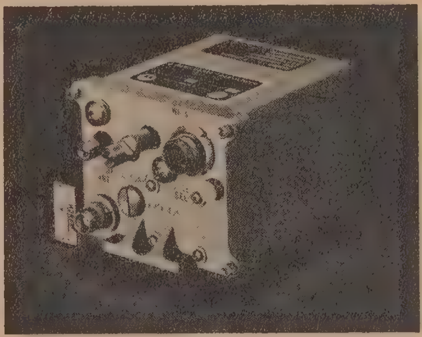
Our transponders are used world-wide from the poles to the equator in a wide variety of missile, airborne, and marine applications. In addition to *immediate—off the shelf—delivery* on all standard items, we specialize in quick reaction design variations for specific requirements.



CRYSTAL VIDEO TRANSPONDERS • S-C-X-Ku-Ka bands and any cross-band combinations.



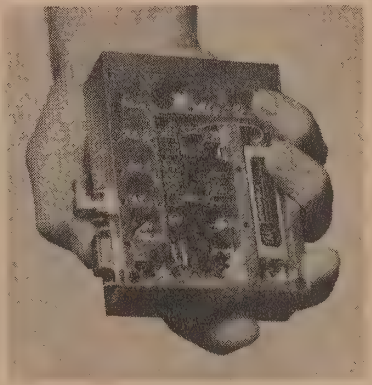
X-BAND RECEIVERS • adapt to existing radars to provide a beacon mode at a fraction of the cost of redesigning and reworking the radar.



SUPERHETERODYNE TRANSPONDERS • S-C-X-Ku-Ka bands and any crossband combinations.

Target/Drone Command Systems Delivery in 8½ Months A.R.O.

MINTACTS (Mobile Integrated Telemetry and Command Tracking System) is a completely integrated and balanced state-of-the-art target/drone command system. It effectively combines the telemetry, command and tracking functions in both the airborne and ground units, and can greatly expand the overall mission capability of both present and future vehicles.



The MINTACTS up-link-receiver (C-band) shows rugged state-of-the-art construction. A decade of drone/target control experience has gone into the development of this versatile, new system.

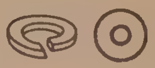
Precision Instrument Screws of cadmium plated brass or stainless steel. Instrument head (oval modified fillister) or flat head. (82°). Size from #000 to #4 — Lengths from 1/8″ and up in 1/16″ increments. Taps available for all screw sizes.

WASHERS

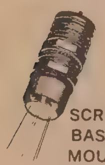


Split Lock and Flat instrument washers in sizes #000 to #4. Precision manufactured to be smooth, clean and free from burrs. Insulating washers formed of an improved grade of XXXP modified phenolic laminate. Suitable for use in vigorous environment, at all frequencies. Sizes from #00 to #4.

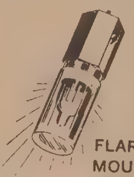
MINIATURE & SUB-MINIATURE INDICATOR LAMPS

For Printed Circuit and Regular Applications

POLA LENS
VARIABLE INTENSITY INDICATORS
Used with Circon sub-miniature lampholders, the POLA-LENS makes it possible to vary the incident light from full brightness to near extinction to meet ambient requirements. Gradual change in lighting control is accomplished by simple hand rotation of the lens.



SCREW BASE MOUNTING



FLARE-MOUNT

- **SMALLER SIZE** — Only 3/8″ diameter. Minimum projection from front and rear of panel.
- **WIRELESS INSTALLATION** in printed circuit design and simplified wiring in conventional installations.
- **WIDE RANGE OF LIGHT INTENSITIES** for both low-level and high-level applications.
- **STANDARD COLORS** — Lenses available from stock include red, green, yellow, blue, white, translucent and clear.
- **ALL VOLTAGES AVAILABLE** — 1.3, 2.7, 6, 14, 28 volts and neon. Single or double-contact models.
- **MESSAGE INDICATIONS** — including numerals, warnings, letters and labels.
- **REPLACEABLE LAMPS** of standard construction having long life and proven performance.

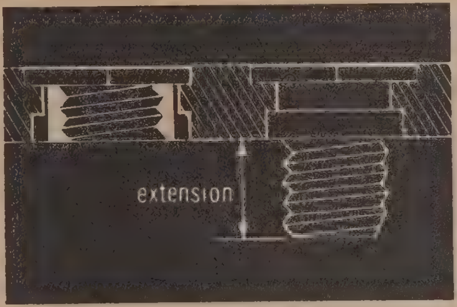
CUT PRODUCTION TIME AND COSTS WITH PRESSERT

PERMANENT CAPTIVE HARDWARE



No welding or soldering is needed to provide permanent, wear-resistant, stainless steel captive hardware for thin metal panels, parts or chassis. Presserts are simply pressed into pre-drilled holes. Cold flow of metal locks them in so they don't pull, push or torque out. Available in stud, flush, extension, self-locking and floating nut form.

Brush designs and fabricates magnetic heads to *your* particular requirements . . . from low cost single-track audio models to highly sophisticated multi-track heads and multiple-head assemblies.

- Digital heads in IBM compatible formats, or format of your choice—with packing densities to 6000 fci.
- Wideband instrumentation heads—from IRIG formats to 42 tracks/inch—out to 2MHz.

Full range of electrical characteristics—to your specifications.

A quarter-century of experience (Brush developed the first successful magnetic recorder back in 1942) has produced proprietary core and structural designs with pronounced advantages in higher efficiency, reduced crosstalk and crossfeed, extended life, higher resolution.

Whatever your problem involving heads or media, give us your specifications.

The Response / Frequency Characteristic shown, together with the record and play data specified for each head Series illustrates the exceptional performance capabilities of these miniature high performance magnetic heads. High output at short wave lengths together with a maximum contour effect deviation of ±2 DB from the 6 DB/octave slope at long wave lengths provides a useful bandwidth of over 6 octaves at any tape speed.

TERMINAL BOARD CONNECTION DIAGRAM

TERMINATION: Silver plated solder lugs on a high temperature glass-epoxy terminal board are standard on all series. Tracks are numbered from 1 through 28 (bottom to top). Start and finish terminal pairs of each track are correspondingly numbered and located as illustrated.

STANDARD FEATURES include extremely low crosstalk ratings and +75°C temperature operation without derating, plus a mechanical accuracy permitting hard mount or adjustable mount installation. Rugged solid metal construction, shock and vibration resistant, provides a hard, stable, low friction, long wear surface for the tape. The cores, shields and all metallic members are mechanically and electrically bonded together for effective electrostatic shielding and grounding of static charges. Precision finishing of the recording face to micro-inch tolerance insures intimate contact of the tape with every channel for uniformly excellent response independent of track location.

ORDERING INFORMATION: To specify the complete catalog number for ordering purposes designate the Series number of the head you require, the inductance in mh and the function ie. Record (AR) only, Record/Play (ARP), or Play (AP) only for audio and analog applications: or Record (DR) only, Record/Play (DRP), or Play (DP) only for digital applications, as in the following example: Catalog #4507—15 DP which is the Series 4500, 7 tracks, 15mh Digital Play Head for ½" tape.

PROFIT MINDED?

Perfection Mica's Hydroforming Service will economically and accurately form your metal parts to any size or shape . . . with minimum scrap and low tooling and finishing costs. Even difficult shapes of metal are formed easily. (A few typical examples are illustrated above). Equally efficient for high or low volume production runs . . . plus the quick changeover and low set-up charges traditional with hydroforming. Centrally located in the midwest for rapid delivery and low shipping costs.

If hydroforming fits your needs, send us your drawing and we'll fabricate to your requirements.

DEPENDABLE ... STANDARDIZED ... INSULATORS, SUPPORTS, COOLING EQUIPMENT AND CONDENSERS FROM LAPP

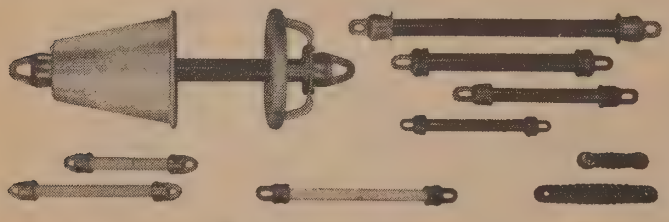
LAPP ENTRANCE INSULATORS—in a wide range of sizes

Lapp pioneered in manufacturing heavy duty entrance insulators, and these years of experience assure you maximum dependability and efficiency. These proven insulators are available in porcelain and steatite and a great variety of types for almost every electrical and mechanical requirement.

LAPP STAND-OFF INSULATORS

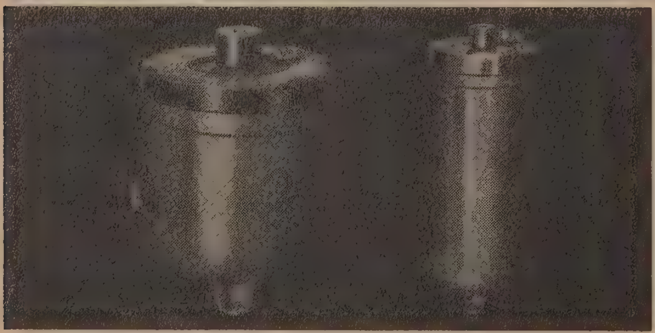
Lapp offers stand-offs in a tremendous selection of standard insulators. Specials? We've designed and produced literally hundreds for the radio, television and electronics industries. The ceramic used in these insulators is the same porcelain or steatite used in large radio and transmission insulators.

LAPP ANTENNA STRAIN INSULATORS



Lapp offers a complete, standard series of insulators for most electrical and mechanical applications, up to 12,000 lbs. strength. Other small units, in porcelain or steatite, are also available as strains and spreaders. Special large strain insulators have been made by Lapp up to 12,000 lbs. strength and 750 kv wet flashover.

LAPP GAS-FILLED CONDENSERS—for duty at high voltages & high currents

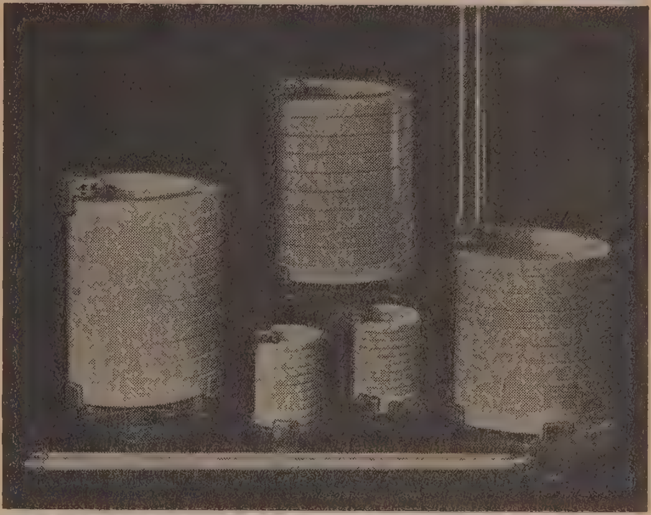


Have low loss, high safety factor in a compact, high efficiency condenser that is unaffected by temperature, moisture or dust conditions. They are available in four tank diameters (7″ to 18″) both fixed and variable. They can be supplied in current and voltage ratings that cover all requirements in the induction heating and radio transmitter fields, up to 85 kv peak safety gap settings and 500 amp current. Tuning on variable models is at ground potential. Write for Bulletin 302.

INSULATION FOR WATER-COOLED SYSTEMS

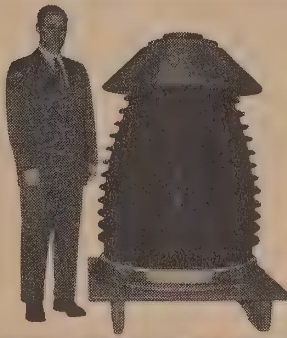
Porcelain Water Coils—for water-cooled power tubes. Lapp porcelain water coils are ideal where cooling water must undergo a change in potential. They provide superior insulation, and eliminate troubles caused by water contamination, conductivity and sludging associated with various types of tubing. Available in a number of standard sizes, assuring optimum water flow and long tube life. They are a permanent investment in a completely trouble-free cooling system.

Lapp Porcelain Pipe—for cooling systems where coils cannot be accommodated. This pipe can be installed on wall, overhead, or under floor of the cubicle. Excellent where water flow rate must be exceptionally high. Available in a range of standard sizes, allowing maximum design freedom.



SPECIALS...BY LAPP

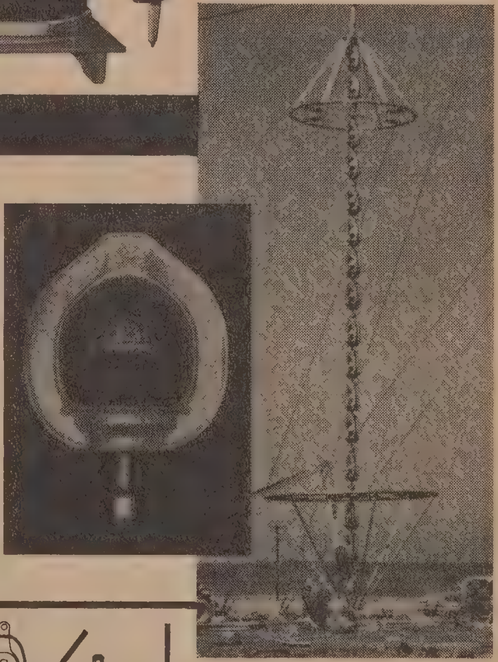
Our basic business is electrical porcelain. Lapp has been designing and manufacturing it for over 45 years. We've solved many tough problems with engineering ingenuity and production ability. Shown here are some of the thousands of special pieces developed. Your requirements become our specifications. Lapp makes special assemblies with economy, to perform with efficiency. Send us your insulator requirements.



LAPP ANTENNA TOWER INSULATORS

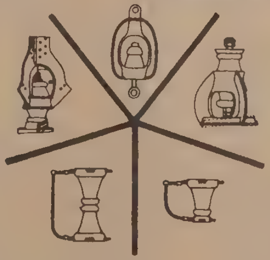
Shown here are giant antenna insulators designed and manufactured for U.S. Navy radio transmitter installation in Northern Maine. Lapp made use of known components to make the design meet electrical requirements. There are 16 insulator units in each string, weighing almost 7½ tons per string! Strings are suspended almost 1000 feet in the air and subjected to all kinds of atmospheric and weather conditions. Development of these highly specialized insulators took considerable time . . . testing alone lasted over a year! This highly unusual project is indicative of the capabilities of Lapp Insulator Company.

Lapp insulators support most of the world's large radio towers, both self-supporting towers and guyed masts. Our tower base insulators have been design-tested up to 9,000,000 lbs.!



Triple insulator tower base assembly—ultimate strength 9,000,000 lbs.

Typical base insulator for guyed mast. Ultimate strength up to 3,000,000 lbs.



Sketches of some of the standard design tower, mast base and guy insulators available.

Let's throw a little Light
on the question
of quality
versus
price

In buying control knobs

Let's face it! There's only one way to deliver quality and price—it comes with experience. Experience in what is our only business—the design and manufacture of control knobs. Experience means a lot of things—with Rogan, it starts with skilled design and top quality materials. It means custom-engineered equipment for precise production, and it means a rigid inspection system to eliminate costly rejects. It is this combination that makes the Rogan Knob the top quality control knob at a price compatible with your production budget. You can get quality and price—if you get a Rogan knob. Write today for our new catalog or see us in Sweets or Thomas Micro-Catalog.

Never use less than the safest High-Voltage leads

For example: a quick connect/disconnect 20 KVDC connector feeding two CRT tubes from a single terminal 20 feet away. It's a compact lead assembly with glass and epoxy receptacles and silicone insulated leads that can be mated safely by hand, yet it's rated 25 KVDC at 70,000 feet!

- Lightweight, flexible assembly
- Meets applicable MIL specifications
- RFI shielding available
- Rated at 10 amps
- No exposed high-voltage
- Corona and radiation resistant
- Foolproof assembly

Let us design an assembly that meets or exceeds your requirements. We're the leading maker of high-voltage, high-altitude custom lead assemblies. Whatever your connection problem, write or call today.

AUTOMATION
of small parts production...
AT ½ USUAL COST!

Whatever your small parts production entails—feeding of raw stock, cutting, forming, stamping, crimping, bending, twisting, insertion motions, soldering, welding or you name it — you can perform these operations automatically by simply positioning the appropriate "tool module" at the working stations of a Federal Universal Power Table.

HIGH SPEED: 5,000 or more completed assemblies per hour.

FLEXIBILITY: "Tool Modules" completely interchangeable in a few minutes, to accommodate changing requirements, from new designs to completely new products.

LOW COST: Standardized units, no exhorbitant custom engineering costs. Illustrated 16-page brochure on request.

LOW MICROWAVE NOISE?

Model SE-200

WHY NOT *PROVE* IT?

SPECTRA Microwave Noise Measuring Instruments are the only equipments yet devised that can give you the FM and AM noise content of conventional and solid state microwave sources — to accuracies as high as ±1 DB. Proof? Maybe not, but close to it.

SPECTRA-EXCLUSIVES:

☐ **RF Frequency Ranges: 1.0 Gc/s to 32 Gc/s**

☐ **Self-Calibrating for both AM & FM noise measurements**

☐ **Broad Video Frequency Coverage: 1 Kc/s to 150 Kc/s**

☐ **Residual FM Monitor: 10 cps to 1 Kc/s**

☐ **Dual Bandwidth Spectrum Analyzer: 100 cps and 1 Kc/s**

☐ **High Sensitivity: AM 135 DB below carrier level; FM .0032 cps rms deviation**

☐ **Minimum RF Input Power: 1.5 milliwatts**

☐ **Self-Contained Microwave Spectrum Analyzer**

☐ **Phase-Locked Local Oscillator**

NEW MEASUREMENT SERVICE

A custom Noise Measurement Service is now operated by Spectra to provide accurate noise measurements of X-band sources in the frequency range from 8.5 Gc/s to 10.5 Gc/s. Readout: X-Y recordings of FM or AM noise vs. video frequency. Write today for technical data and complete details.

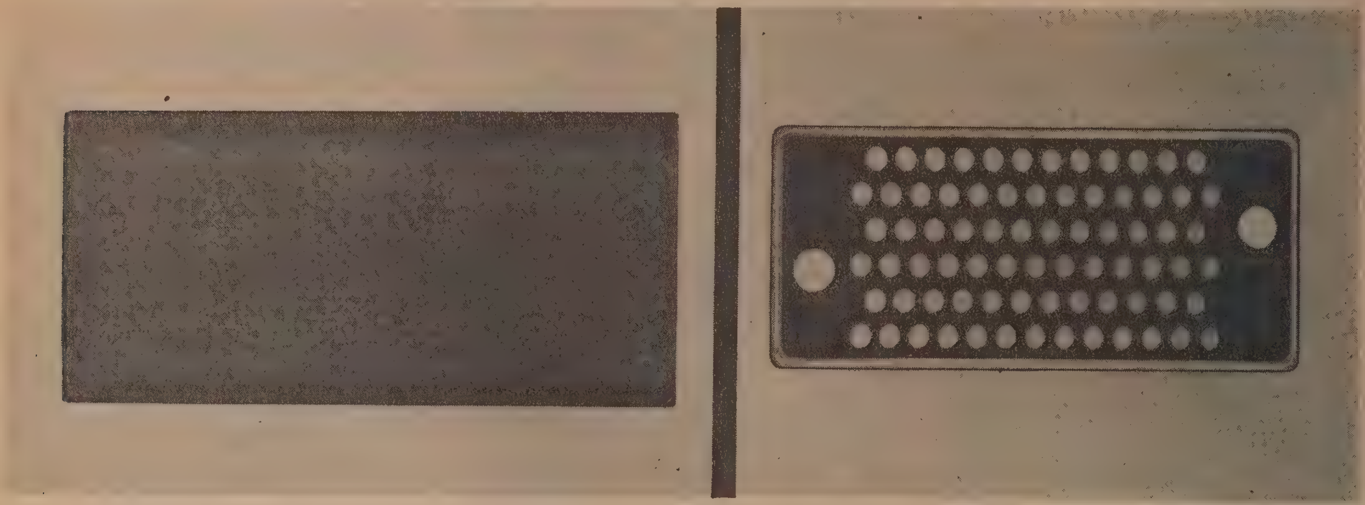
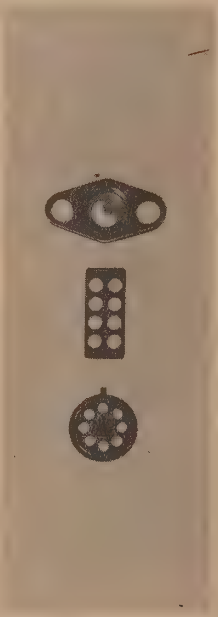
IN .9 OF A SECOND, RICHFIELD CAN TRANSFORM A SOLID METAL MASS INTO A PRECISION PART



How coining can upgrade your product and lower your costs



The process of coining — the forming of metal by impact and cold displacement — is not a new development in industry. **But** the application of coining to mass production of **close tolerance** components **is radically new** — and Richfield research is responsible.

Today, Richfield's capability in coining offers unlimited design opportunities to engineers and manufacturers of coined bodies and transistor bases for compression hermetic seals and other applications in the electronics field.

Three of the thousands of parts that Richfield has custom designed and produced are illustrated in the center panel. (1. Copper Heat Sink. 2. Micro-miniature .100 grid relay base. 3. 8-hole TO-5 matched or compression seal.) They are coined from cold metal in fractions of a second, yet they offer advantages that are clearly visible: Complex, intricate designs; absolute conformity to close tolerances; extremely flat and parallel body surfaces with shaved holes — prime requisites for superior glass to metal hermetic seals. Only slow and painstaking machining could duplicate these parts — and only at prohibitive cost.

When you need a new component, rely on Richfield to produce it — with greater precision, at lower cost.

Need thin-wall tubing or tubular parts?

Then contact Uniform Tubes.

Here's why . . .

- More than 90 alloys from aluminum to zirconium.
- O.D.'s from 0.003″ to 0.625″ to specification.
- Wall thickness from 0.050″ to as thin as 0.0005″ in many O.D.'s.
- Tolerance on wall thicknesses is ±10%, and closer tolerances are held when required.
- ID surface finishes as smooth as 8 microinches in many alloys and sizes.
- Fabrication of many tubular parts at a fraction of their former cost. For example, ID-radiusing of ends can be provided at nominal cost.

Whether you need pen or pointer tubing, spring contacts, pin connectors or potentiometer shafts, tubular linkages, glass-to-metal seals or seamless metal shielding, you'll find Uniform Tubes a fast, reliable source for Quality in Quantity. Call today or send for our complete literature file. 807

Eagle-Picher guarantees dependable supply—ultra-high purity

You're *sure* with Eagle-Picher, unsurpassed source of all these products in ultra-high purity compound and metal form. Over 30 years ago, Eagle-Picher made Gallium metal recovery practical while separating Germanium from Zinc concentrates. And as a result of constant purification and upgrading since that time, Eagle-Picher today, for example, supplies Germanium and Gallium Oxides with *minimum* spectrographic purities of 99.9999% and Germanium and Gallium metals with spectrographic purities over 99.99999%! So Eagle-Picher compounds and metals continue to lead in quality and dependability for the rigid, precise demands of the semiconductor industry.

EAGLE-PICHER COMPOUNDS AND METALS

The HICKOK DMS 3200 Digital Measuring System is a precision electronic measuring device which displays readings in digital form instead of the relatively inaccurate and difficult-to-read moving-pointer meter display A companion PR 4900 Digital Printer allows the displayed readings of the DMS 3200 System to be printed in permanent form for storage and future reference

Because the DMS 3200 System consists of a main frame which will accept a number of "plug-in" units, it can be used to measure a variety of electrical parameters. The main frame provides display of the reading; the plug-in determines the application

Model 34-FG with clear plastic front

Same model with picture window frame.

Widely used where constant or known frequency is important to efficient operation of equipment.

Some J-B-T meters for electronic circuits are made with high Q characteristics for sharp response to narrow bands, and others with lower Q for wider band response. All are permanetly accurate within ±0.3% or better, and certain models can be had with ±0.1% accuracy at reference temp.

The J-B-T design is not ordinarily affected by poor wave form, external magnetic disturbances, or voltage fluctuations. Quality performance for military and commercial applications is assured by J-B-T's know-how with 27 years of continuous experience in the design and complete manufacturing of many thousands of these instruments. Current production is covered by recent J-B-T patents.

actual size

API's new digital panel meter can also indicate PSI, roentgens/hour, or any other transducer output. Internal suppression is available so that, for example, 10 to 50 milliamperes can be displayed as 0 to 100 per cent.

Model 430 is notable for sensitivity (range of 0 to 20 millivolts available), small size, long-term accuracy, optional BCD output, and non-blinking signal display. Other options include read-hold and automatic polarity. Readout is almost instantaneous. Either panel or bench mounting.

Accuracy of DC voltage reading models is ±0.1% of reading, ±1 digit. Accuracy of DC current reading models is ±0.25% of full scale.

List price, standard ranges: $295, for digital thermometers, $495. (T/C) and $570 (RTD probe)

API also makes analog panel meters, meter-relays and self-contained controllers.

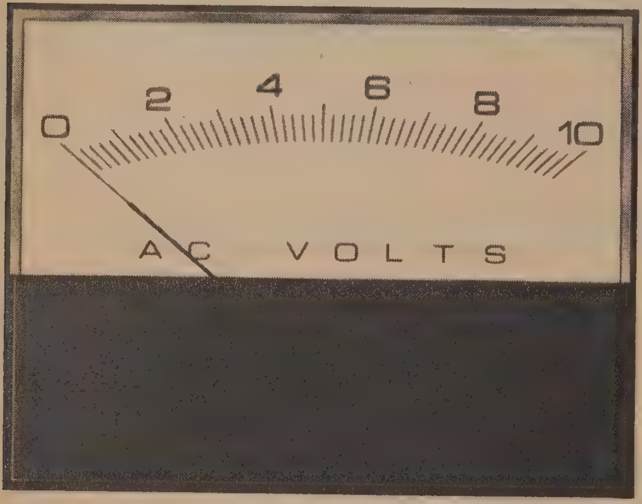
MODUTEC TAUT BAND PANEL METERS

The Modutec family of precision permanent-magnet/moving-coil panel meters combines advances in meter movement art with clean, functional styling. It anticipates the demands of designers for meters that will augment the appearance of equipment control panels without sacrificing accuracy or legibility.

Each of the three Modutec styles is available in a full range of five sizes — an important plus for the designer faced with the necessity for installing meters of various sizes on the same or adjacent panels.



S SERIES
SURFACE MOUNT – BLACK COVER

The handsome aspect ratio and clean cut detailing of these meters will add distinction to an instrument or control panel. Available in five sizes and a wide variety of ranges, this series provides new latitude for the equipment designer.

SPECIFICATIONS

Modutec meters meet or exceed the performance requirements of USA Standard C-39.1.

Accuracy: ±2% for DC meters;
±3% for AC meters (60 Hz sine wave).

Tracking: ±1.5% for DC meters;
±2% for AC meters;
(vertical mounting position).

Repeatability: ±0.5%.

Response time: 1.5 seconds max. for all ranges except 0-50 microammeters and below, where the response time is 3.0 seconds max.

Resistance or Sensitivity: ±10%.

OPTIONS, MODIFICATIONS, SPECIALS

The catalog offers a number of "off-the-shelf" options (improved accuracy, mirror scale, sealed case, etc.) for quick delivery. Two factory-type modification centers enable us to give quick service on custom requirements. Modutec engineering assistance is available for special requirements.

C SERIES
SURFACE MOUNT – CLEAR COVER

This series features a case front of clear acrylic, polished on the outside and finely ribbed on the inside surface. The visual effect of this is to greatly reduce contrast between the meter and the adjacent panel, resulting in a very pleasing overall appearance.

B SERIES
BEZEL MOUNT

A convenient means of ordering a meter assembly for behind-panel mounting, this is a complete package, comprising meter, bezel, hardware, template, and mounting instructions. Either "S" or "C" series meters may be selected. The cleanly designed bezel features minimum cross-section consistent with function, and is available as solid black or with brushed metal inline as shown below.

AI-2 with flag (actual size)

AI-2 with pointer (actual size)

AI-21 (actual size)

Ammon Series AI miniature, self-shielded mechanisms are designed to provide optimum performance in airborne indicating systems or wherever critical indicating and control functions are required. Self-shielding makes compass effect negligible. Units may be mounted side-by-side with no interaction. Panel material has no influence on calibration. Their compact size, coupled with the versatility of synchro-type and conventional type mounting methods, offers design engineers great freedom in adapting them to specific applications.

AI-2 mechanisms offer these advantages reduced size and weight, high torque-to-weight ratio, self-shielding, enclosed movement and negligible compass influence. Model AI-2 is 11/16" in diameter, 1" in length and weighs 3/4 of an ounce. Model AI-17 is 7/8" square and flange mounted, .832" in body diameter, 1-25/64" in length, weighs 1.6 ounces, constructed of brass, and hermetically sealed. Model AI-20 is 7/8" square and flange mounted, .832" in body diameter, 1-11/32" in length, weighs one ounce, constructed of hi-temp plastic, and sealed against dust and moisture. Model AI-21 is 7/16" in diameter, 31/32" in length and weighs 11.5 grams. Choice of pointer or flag is available on all models.

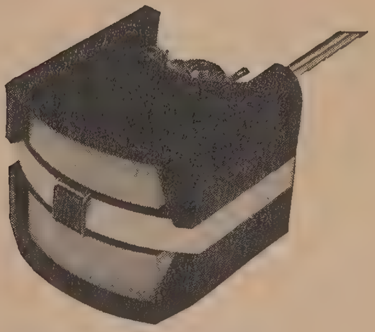
Ammon AM-1 self-shielded panel meters have smart, sophisticated styling . . . easy reading scale . . . a most complete selection of sizes ranging from sizes 1-1/2 to 4-1/2". Rugged high torque mechanisms offer 1% linearity, 2% accuracy and sensitivity to 20 ua. Completely shielded to eliminate error from magnetic panels. Mounts bezel-to-bezel on any material without interaction or effect on calibration. Choice of colors or finishes, custom dials — ASA/MIL 4-stud mounting in AM-1 and AM-4 models and ASA/MIL 3-stud mounting in AM-2 and AM-3 models.



APT-1; 1 cu. in., 3.15 oz. (actual size)

Ammon APT-1 moving coil mechanism is a highly stable, linear and accurate mechanism for indicating, control or recording systems. 18-0-18° linearity is 1%. Coil design with over 75% of winding "working" in high energy, uniform field air gap assures greater accuracy. Coil system weighs 0.85 gm, develops 26.4 mmg of torque; 31:1 T/W. Mechanism offers negligible vibration pivots and jewels — custom damping — wide range of sensitivities.

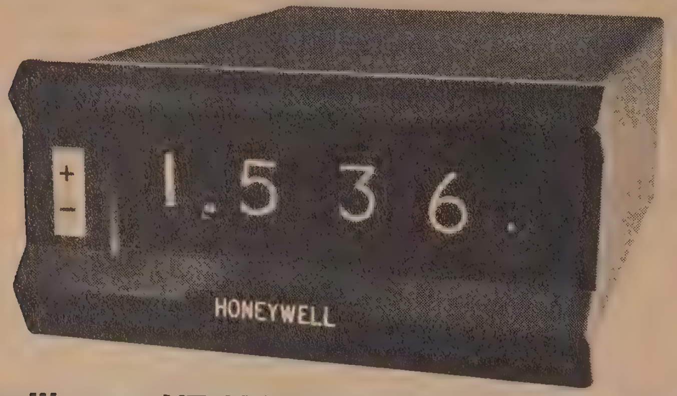
The Convertible...



Honeywell's new VT-100 Digital Panel Meter only $320

Now the options are yours. Quick and easy. The VT-100 converts to measure AC or DC voltage, AC or DC Current or Ohms **merely by changing one card.** With the VT-100 you only purchase one basic meter, then convert measuring functions as desired.

The VT-100 has a basic range of 1.0 volts DC, 100% overrange with a fourth overrange digit which reads to 1.999 volts. When input exceeds 1.999 volts, the polarity sign blinks and the VT-100 indicates all zeros.

No hard-to-get-at zero adjustment. The VT-100 automatically adjusts to zero, electronically.

Specifications

THRULINE® **RF DIRECTIONAL WATTMETERS**

Insertion instruments for measuring and monitoring incident and reflected power in coaxial transmission lines with ± 5% of full scale accuracy. Insertion VSWR is less than 1.05. Net power under any load condition is the difference between incident and reflected power readings, which also yield load VSWR from a nomograph.

460

4311 THRULINE Peak **and** CW Wattmeter **also** measures power of **pulsed RF** systems such as air navigational aids, telemetry, radar, etc. from 0.4 microsecond pulse width (± 8% accuracy).

Models 4111-12-13 are new palm-sized CW Wattmeters with one forward and one reflected power scale for servicing transmitters in the 2-30 MHz or 25-175 MHz frequency range.

Line Sections with single or double element sockets for all THRULINE Wattmeters, as well as ⅞" diameter instruments available.

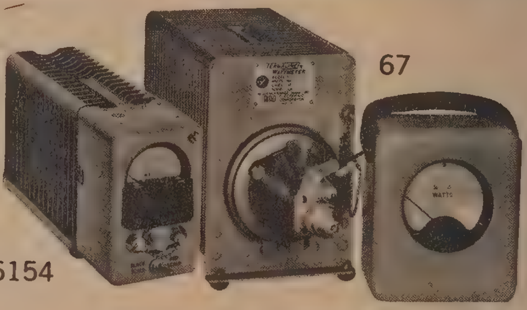
TERMALINE®
RF COAXIAL LOAD RESISTORS

For accurate, non-radiating termination of 50-ohm RF coaxial transmission lines are designed for use in permanent installations, development testing and trouble shooting of transmitters, intermediate components, power tubes, and accessories.

TENULINE™ POWER ATTENUATORS

In addition to terminating a 50-ohm system, deliver an output signal 30 dB below the input, for RFI measurements, for extending the range of low-power wattmeters, for isolation of system components, etc.



67
6154

TERMALINE® **RF ABSORPTION WATTMETERS**

Are direct reading instruments for absorbing and measuring RF power in 50-ohm coaxial line systems through the frequencies of 2 to 1000 MHz. The load section of the TERMALINE Wattmeter serves as a dummy load. The indicating meter is calibrated to read RF power directly in watts with ±5% of full scale accuracy. TERMALINE Wattmeters are available from milliwatts to kilowatts.

COAXIAL RF FILTERS

Custom engineered or field-proven designs. High rejection attenuation filters available with Low-pass cut-off from 16 to 2700 MHz (about fifty designs at 400 MHz), Hi-pass cut-off frequencies from 30 to 1000 MHz, Band-pass as narrow as 5% of center frequency. Sizes from ½ cubic inches, with subminiature connectors, to 3⅛" line.

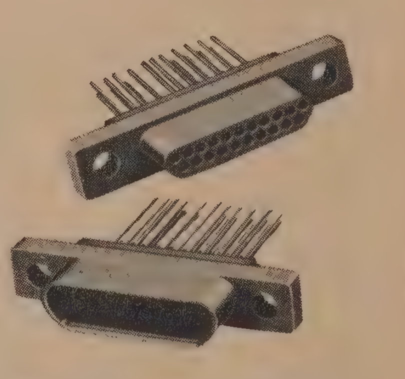
MICROMINIATURE CONNECTORS



The MICROPIN® contact enables ITT Cannon to reduce the size and weight of connectors while maintaining strength and reliability. This flexible pin consists of seven spring members, insuring constant contact and very low noise level even under extreme vibration and shock. The micro line includes the CENTI-K™ (.100" centers) and the MICRO-K™ (.050" centers) 55-contact circular plugs. Also included are 50-MIL STRIP™ connectors (up to 120 contacts in a single row and up to 6" long) and MICRO-D™ rack and panel connectors in seven shell sizes to accommodate 9 to 51 contacts on .050" centers.

For further information contact your ITT Cannon distributor or see the Yellow Pages for your nearest ITT Cannon Sales office. ITT Cannon Electric, 3208 Humboldt Street, Los Angeles, California 90031. A division of International Telephone and Telegraph Corporation.

Noise figure of mixer-preamplifiers is obtained by adding range given for the mixer selected and the figure shown under "IF N.F. over 1.2 dB" for the required preamplifier. EXAMPLE: A CBH mixer mated with a -3 preamplifier having a 60 MHz center frequency and 8 MHz bandwidth has a noise figure range of 6.5 to 7.0 dB plus 0.4 dB; thus the noise figure range is 6.9 to 7.4 dB.

†RF to IF power gain: 6 dB (assumed mixer loss) has been deducted from preamplifier gain in determining stated values.

‡For linear operation, an input power increase of 3 dB over the stated "mixer input signal" level will result in less than 1 dB of output signal compression.

IGC has developed a standard parts concept of motor design to give over 1000 variations in each size. This "Family Plan" concept means customed-designed motors at off-the-shelf prices for:

1. Aerospace—actuators, recorders, rotating beacons, landing lights.
2. Communications—frequency tuners, cooling equipment, antenna drives.
3. Computers–tape reel drives, capstan drive motors, tachometers.

For free technical data bulletins on complete line of IGC precision motors, gearheads and tachometers, write: Mr. R. D. Wright, Manager of Sales, Indiana General Corporation, Electro-Mechanical Division, Oglesby, Illinois.

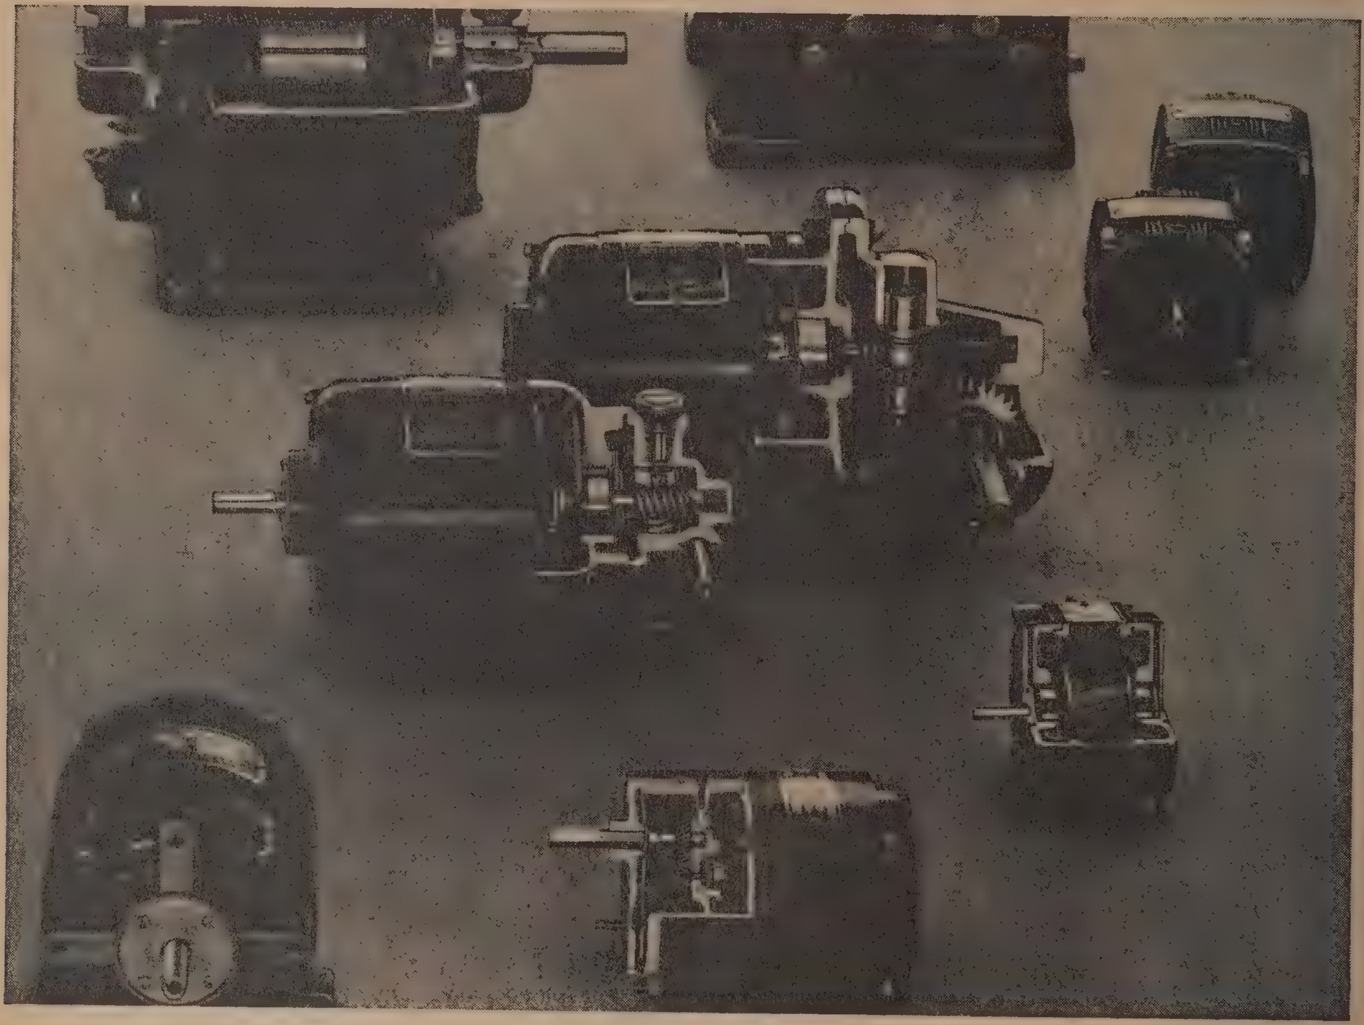
Bodine Motor After Delivery Economies (ADE)

help reduce your end-costs...improve your product



You design, you specify, you build...and continually ask, "What will it cost?" So, you're well aware that it's the final cost...not first cost...that's important when you buy fractional horsepower motors (or any other product for that matter).

So we won't belabor the point. But we should like to tell you why Bodine Fractional Horsepower Motors and ADE (After Delivery Economies) reduce your end-costs. Here's why:

1. You'll rarely experience a reject...in your receiving department, on your production line, or in final tests.
2. In the field, Bodine motors perform consistently according to rating. They'll support the integrity of your product.
3. Bodine Motors are reliable to a degree ordinary motors cannot match. This means few call-backs, low field service costs.
4. Bodine Motors help your product earn customer satisfaction and repeat sales.
5. "Three-piece" design of Bodine Motors means really easy servicing.

Bodine motors are used for electrical control devices, medical apparatus, communications equipment, data processing equipment, laboratory equipment, recording instruments...and many other applications.

Over 3,500 standard catalogued specifications, including over 275 *stock* types and sizes from 1/2000 to 1/6 hp. Write for Bulletin S. Bodine Electric Company, 2534 West Bradley Place, Chicago, Illinois 60618.

NEW! Cooling-fan Assemblies

For Electronic-equipment Cabinets

New 100 CFM fan assembly is powered by reliable GE shaded-pole motor and is equipped with a durable, five-blade molded fan and brackets. The two-pole Unitized® motor features a recirculating oil lubrication system for extra long bearing life. The assembly is only 2⅞ inches deep from mounting plate to end of motor, and measures slightly under 4¾ inches square with mounting holes 4⅛ inches between centers.

500 CFM fan assembly is powered by GE unit-bearing, four-pole, shaded-pole motor with recirculating oil lubrication system, and includes five-blade metal fan and grill. Measuring less than 6¼ inches deep from front to back, it has a ten-inch diameter fan venturi with eight holes around venturi flange for easy mounting. Also available with two-pole motors for even greater air-flow.

The units, which require only simple ON-OFF switches for operation, are designed for years of quiet, dependable, continuous-duty operation without maintenance. These blowers are available for 115- or 230-volt, 60-cycle duty, 50-cycle designs are available with somewhat lower output. For complete information, write for Bulletin GEA-8258.

SYNCHRONOUS, REVERSIBLE

Low-speed Gearless Servo Motors

For servo, stepping, and other low-speed high-torque applications, General Electric provides a line of low-speed, synchronous inductor motors in 4⅛-inch diameter models. These motors provide a choice of 50, 75, 150, or 250 oz. in torque at exactly 75 rpm without the use of speed-reducing devices. The motors provide fast starting, stopping, and reversing for 50- or 60-cycle applications at either 120 or 240 volts. For complete information write for Bulletin GEC-1294.

Reel Drive Motors

For Computer Tape Transports

GE's full line of fhp direct-current motors includes four frame sizes widely used for reel drives: 3$\frac{5}{16}$", 3$\frac{13}{16}$", 4⅝", and 6$\frac{5}{16}$" diameters. Special end mountings and shaft extensions meet exacting application requirements. Series, split-series, compound, shunt, and compensated-shunt winding designs offer a broad design choice. Stall torque ratings from 3 to 120 ounce-feet and higher span various application needs, and motor voltage requirements are normally matched to your system design. Write for Bulletin GEC-1795.

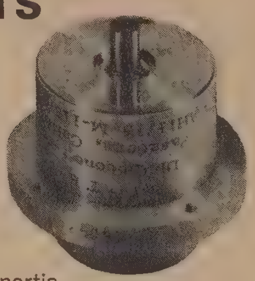
INVERTERS

MATCHED SETS



Kintron motors feature dynamically balanced rotors, preloaded Class 7 bearings, zero end play, and < 0.1 mil T.I.R. shaft runout. Kintron manufactures a full line of motors which includes hysteresis synchronous, permanent magnet, and low inertia servo motors and torquers.

Kintron inverters are ultra-miniature power sources for hysteresis synchronous motors. Speed accuracy is maintained by a high frequency tuning fork, output current limiting products, both motor and inverter, and short circuit protection is provided.

Kintron manufactures both hysteresis synchronous motors and inverters; therefore, motors and inverters can be impedance matched at time of manufacture.

SEAMLESS DRIVE BELTS

Kintron Mylar*, Kapton (type H)*, and Polyurethane seamless belts afford the ultimate in smooth, low flutter precise power transmission. Available range: 1- to 100-inch circumference and 0.005- to 0.014-inch thick. Maximum width is 5% of length.

MT-1 TEST INVERTER

The MT-1 Inverter is a test instrumentation type, variable frequency square wave, power source for operating and testing small instrumentation motors. This device is of prime value in quality assurance testing of hysteresis synchronous motors and engineering experimentation.

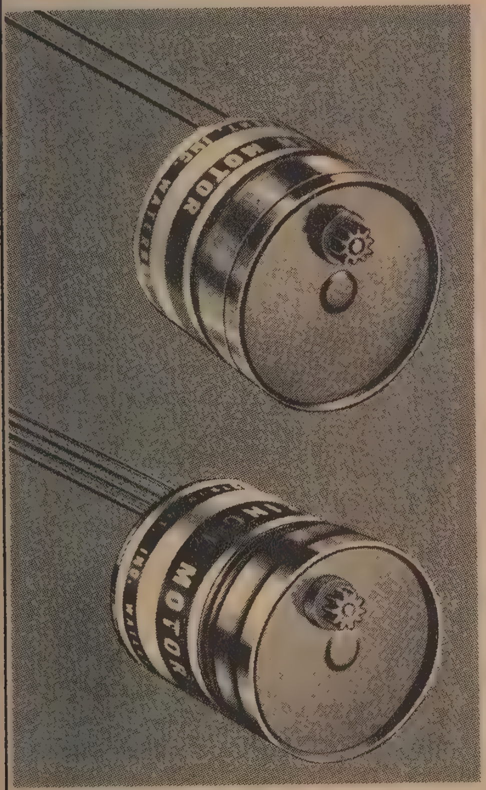
the revolutionary motor...
BIG INCH™

These small, unique motors are a genuine break-through in the State of the Art of timing motors. Only 1¹⁄₁₆" OD, they develop higher torque than many motors twice their size and always deliver instant, positive directional starting. They operate on 1 or 2 watt input. Mass production provides low unit cost.



Series 33000
Single Phase, Synchronous, Integrating. Fast Start-Stop. Rotor locks in on first line frequency cycle; stops instantly without coast. One watt input at rated voltage. Standard voltage ratings 20V and 115V, 60Hz. Cool operation. Unidirectional, shaded pole starting. No mechanical no-backs. Gears are heavy duty, permanently lubricated and sealed. Standard speeds 360, 300, 60 and 3.6 RPM. With split coils this motor becomes a stepper motor. Series 31000, below.

Series 33600
Bidirectional, 2-Phase Synchronous Integrating. Instantly reversible by switching capacitor from one coil to the other. Fast start-stop and reversing characteristics for precise positioning. Can "inch" in either direction in small increments. Two watt input. Other characteristics same as 33000 series. With split coils this motor becomes a step servo motor. Series 31600, below.

Series 31000 3-wire Stepper.
Unique principle drives rotor 360° for each pulse cycle. Other step angles available through gear reduction.

Series 31600 Reversible Step-Servo.
Bidirectional operation is obtained by energizing four coils in sequence or can be driven by simple logic circuitry up to 200 steps per second.

Series 32000 Brushless DC Timing Motor with Chronetic™ Governor.
Maintains speed constant within ± 0.1% over a voltage range of 20-30 v. DC. No commutator or contacts.

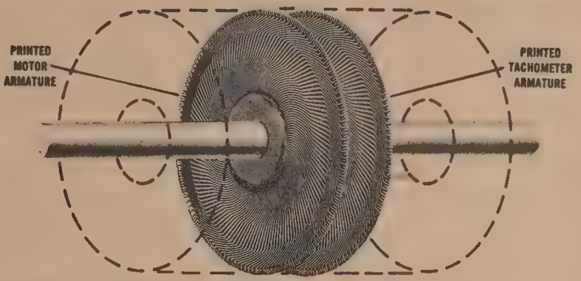
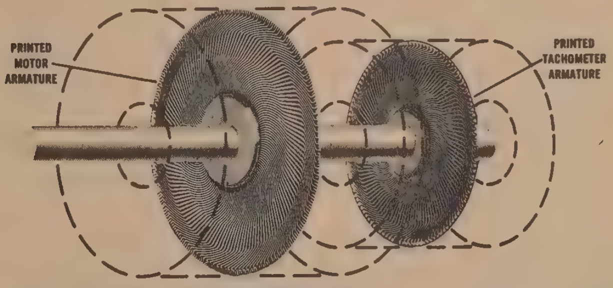
two new Tachometers



INTEGRAL TACHOMETER – Adds a superior tachometer to standard printed motors **with no increase in motor size.** Tach features include low ripple (5% peak-to-peak at 100 rpm; below 2% over 1000 rpm), excellent linearity and elimination of mechanical coupling and torsional resonance problems. The printed tachometer armature typically has the equivalent of over 100 commutator bars raising the frequency of output ripple far beyond that attainable with conventional tachometers. Ideal for wide speed range velocity servos.



LOW INERTIA TACHOMETER – Designed for high performance incrementing servos where low ripple, low inertia and minimum torsional resonance are necessary. Built as an integral part of the rear shaft extension of any standard PMI motor, this tachometer has a lower ripple output than any comparable tach available today . . . 1.5% peak-to-peak at 50 rpm. Inertia added by the tachometer is only .0006 oz.-in.-sec.^{2}. Couplings and mounting hardware are eliminated by this design and accidental damage to the tach is minimized by housing it in a rugged ¼" aluminum casting.

TORQUERS

Clifton can custom design torque motors to your special need. Our deep experience in the flat, "hollow shaft" configuration qualifies us uniquely in this field. A Clifton torque motor actuates the fins on Redeye, the Army ground to air missile.

BLOWER MOTORS

This typical Clifton Blower conforms to MIL-B-23071. It exhibits remarkable reliability i.e. "life" in the order of 1000 hr. accelerated life with temperature variations. It is very low in self-generated vibration.

STEPPER MOTOR

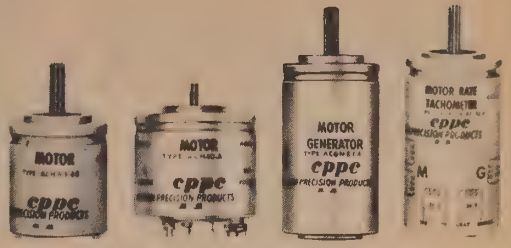
MOTOR

STEPPER MOTORS

Clifton offers a wide variety of permanent magnet or variable reluctance type stepper motors in sizes 8 through 15.

We also design and manufacture the logic and pulse source modules which control our stepper motors.

Stepper motors are extremely useful where signals are presented as pulse trains rather than analog voltages.

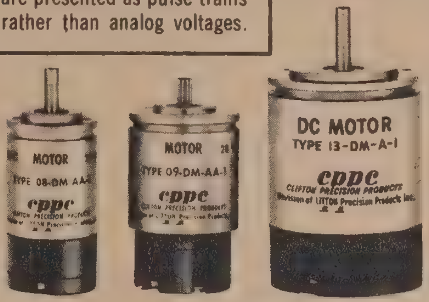


AC MOTORS, GENERATORS, AND TACHOMETERS

Clifton offers a wide variety of AC motors in sizes 8, 10, 11, 15. Our motors exhibit a very high degree of efficiency, also higher torque to inertia ratios and lower and more uniform starting voltages. All motors are high temperature resistant.

Because of higher torque/inertia ratios, our generators and tachs are smaller and lighter.

Clifton also offers temperature compensated integrating tachs and high signal to noise integrating type tachs. Gear heads available on motors and tachometers.



DC MOTORS

Clifton offers many different types including a new line of low cost sizes 8, 9, and 13.

Units are available which accept either 28, 20 or 14 volt inputs; also with governor which maintains constant speed within ±1%. Gearheads available for our DC motors. DC tachometers also available.

Pain Killer.

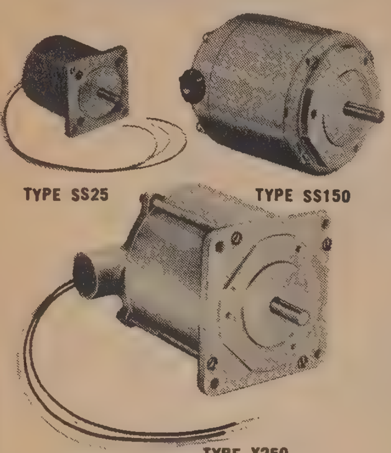
SLO-SYN®

Synchronous/ Stepping Motors



Permanent magnet a-c motors with instant start, stop and reverse and basic shaft speed of 72 rpm at 60 cycles (200 rpm for types TS50 and TS52). Bidirectional; stop or reverse within less than 5° of shaft rotation or .025 sec. Can remain coupled to load and safely overdriven when used with auxiliary high speed motor. Can be completely stalled without overheating or risk of damage. Can also be used for phase-switched d-c stepping at either 100 or 200 steps/rev. (36 or 72 steps/rev. for types TS50 or TS52). Steps accurate within ±.09° noncumulative.

HOW SYNCHRON® MOTORS
control this specialized
TIME-DELAY RELAY

In this special design timer a Hansen SYNCHRON Motor drives the cam-type sequence timer for an electronic time-delay relay. When power is applied, SYNCHRON runs through the first three sequences; starts the time-delay relay, then stops. Relay performs a panel-adjustable delay period of 180-240 seconds, then returns power to the motor to complete the sequence. Special applications are easy to design, using SYNCHRON Motors. How about yours? Call or write Hansen, or your SYNCHRON representative, for brochure and all the facts.

SYNCHRON timing and control motors; 168 different speeds. Right, left or reversible rotations. 8, 20 or 30 oz.-in. torques; 220, 110 or 24 volts; 60, 50 or 25 cycles.

Capacity Meter Plug-in DP 200 $275

The HICKOK DMS 3200 Digital Measuring System is a precision electronic measuring device which displays readings in digital form instead of the relatively inaccurate and difficult-to-read moving-pointer meter display. A companion PR 4900 Digital Printer allows the displayed readings of the DMS 3200 System to be printed in permanent form for storage and future reference.

Because the DMS 3200 System consists of a main frame which will accept a number of "plug-in" units, it can be used to measure a variety of electrical parameters. The main frame provides display of the reading; the plug-in determines the application.

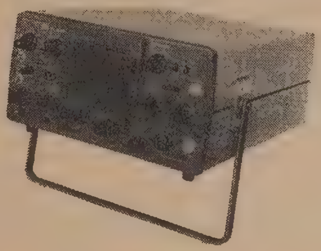
This portable unit features line or battery operation and a bandwidth of 20 MHz (17 nsec rise time). Provides 18 ranges of calibrated sweep speeds with high performance triggering stability in excess of 30 MHz. Display area is 5 cm x 6 cm and sensitivity is 50 mv. An internal square-wave generator provides 8 calibrated outputs.

For full details, write for TIC-3316.



Model S1302A

A true dual-beam portable scope featuring line or battery operation and a choice of 2 plug-in Y amplifiers—either 15 MHz bandwidth (23 nsec rise time) or 30 MHz bandwidth (12 nsec rise time). Provides differential input, internal voltage calibrator and both signal and time delay. Display area is 6 cm x 10 cm.

For more data, write for TIC-3318.

SOLID-STATE FREQUENCY METER

Meter with Deviation Monitor

This unique instrument gives direct digital readouts in 3 ranges—10 Hz to 100 MHz, 105 MHz to 175 MHz, and 405 MHz to 475 MHz. Wideband heterodyne unit eliminates tuning. Optional, plug-in deviation monitor/synthesizer provides signal output in 3 bands—25 MHz to 50 MHz, 136 MHz to 175 MHz and 406 MHz to 475 MHz. Displays deviation in three ranges—1.6 kHz, 8kHz, and 16 kHz.

We know our way around—we've been developing papers for new applications, improving papers for old, for more than 20 years now. As a result we have a complete line of pressure, heat, ink and electrosensitive recording papers and a thorough understanding of the mechanics of instrument and computer read-out.

We also have complete printing facilities and can provide custom packaging when required.

It makes a difference when you need design assistance on regular or "special" papers.

For further details write or telephone Ludlow Charts, Ware, Mass. 01082. Telephone (413) 967-6204.

Stabilize/cut GOLD plating costs.

With the price of gold higher and fluctuating, now is the time to ask Technic for gold plating cost-cutting and stabilizing products and methods.

The proper gold can save you money. (It's usually a Technic gold.)

Technic "Gold Futures" can stabilize your price of gold salts and solutions for up to two years.

Technic Gold Recovery Units can recover gold from rinse waters that are now lost down the drain.

Technic Gold Strip can recover gold from defective parts, jigs and wires — and, since it doesn't attack base metals you can salvage the part also.

Technic Customized gold plating equipment can cut operating costs.

Technic gold plating consulting and spectrographic analytical service can reduce your gold costs and **keep** them down.

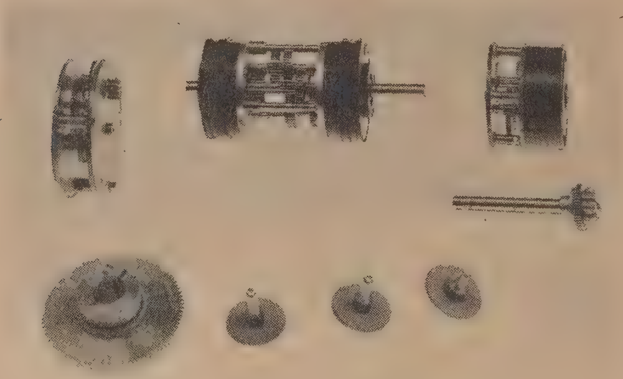
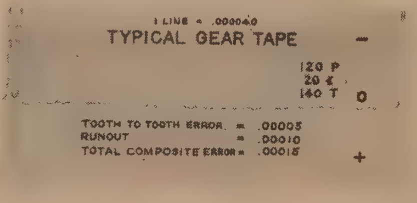
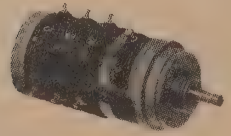
ELECTROMECHANICAL ASSEMBLIES



Gears, speed reducers, and slip clutches, as shown in this photo are typical examples of CIC design and manufacturing capability for precision components custom built to your requirements.

CIC uses modern gear cutting machinery such as Mikron 79 and Barber Colman-6-10 (not shown) to produce ultra precision gears.





Precision electroclutch-pot shown is typical of clutches, brakes, motors, switches, and commutators which CIC supplies as tested and guaranteed assemblies.

CUSTOM-ENGINEERED WIRE WOUND AND CONDUCTIVE PLASTIC PRECISION POTENTIOMETERS

...FOR YOUR MOST DEMANDING APPLICATIONS—Higher standards of performance at competitive prices are being demanded of today's electronic equipment. How does the precision pot stack up in this situation? It almost becomes a necessity. With Gamewell you specify exactly what you want — *no* more and *no* less! Gamewell precision pots pay off in the long run. They're tough. They're dependable. And they're remarkably precise. In most cases they actually cost less, when all is considered, than so called "economy" pots. Choice? You tell us. We can do — note the broad line of types shown below. These types represent but a small segment of the scope of Gamewell's *craftsmanship.* Let your pot requirements take a turn for the better; call in your local Gamewell representative today or write for a copy of our new detailed pot catalog.

Power Supplies to Your Specifications

It is the unique power supply problem for which Peerless has the solution whether your operating requirements are commercial or Mil. Spec. Peerless experience covers both DC and AC supplies. AC inputs are normally 60 to 400 Hz. DC outputs extend to 30,000 V.D.C. at low current. Regulation values normally range from 0.25% to 10% no load to full load with peak-to-peak ripple voltages less than 1% of output voltage within this range. Peerless has designed and manufactured power supplies with two or more outputs, that operate in ambients up to 125°C and withstand shock to 50G.

MODEL N1000A
With SG-17A Plug-in Oscillator

NA series
500VA to 15KVA

The NA SERIES of AC POWER SUPPLIES are exceptionally flexible sources of audio power. Each power supply consists of a **REGULATED AUDIO POWER AMPLIFIER** with interchangeable fixed or variable **PLUG-IN OSCILLATORS** for a wide range of precision AC power applications. The Amplifier has a full power range of 45-6,000 cycles. With the incorporation of a **CML** Plug-in Oscillator precise fixed or adjustable output frequencies are available anywhere within this range. Plug-in Oscillators are Wein Bridge or Tuning Fork controlled.

Regulated Power Amplifiers with Precision Plug-in Oscillators

- **Each Model can be operated either as a precision AC Power Supply or as an Audio Power Amplifier.**
- **INTERCHANGEABLE PLUG-IN OSCILLATORS** . . . 23 standard oscillators are available — to provide fixed or adjustable output frequencies between 45 and 6,000 cps and stabilities to ±0.001%.
- **INSTANTANEOUS OVERLOAD PROTECTION**
- **MINIMUM PACKAGE SIZE** . . . 2000VA in 14" rack height; 750VA in 8¾" rack height.
- **CONSTANT VOLTAGE OUTPUT** . . . 0.5% regulation for no load to full load change — response time less than 50 microseconds.

Frequency stabilities range between ±0.25% and ±0.001%. Plug-in Oscillators include gain control as well as front panel jack for external signal drive. Each Power Amplifier model may also be operated without a plug-in oscillator; however, in that case, the Model SA-2 External Signal Adapter is required. Precise amplitude stability and low harmonic content are provided by a combination of positive current feedback and inverse voltage feedback.

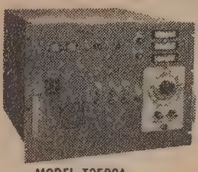
three phase frequency converters



MODEL T2500A
With SG-36B Oscillator

MODEL SG-35A
Plug-In Oscillator

TA series
150VA to 20KVA

The new TA Series of Three Phase Frequency Converters are exceptionally versatile sources of AC power. Each converter consists of a regulated **THREE PHASE AMPLIFIER** with interchangeable fixed or variable frequency **PLUG-IN OSCILLATORS** for a wide range of precision AC power applications. The amplifier has a full power range of 45-6.000 cps. With the incorporation of a CML plug-in oscillator (which includes 120° phase shift network) precise fixed or adjustable frequencies are available anywhere within this range.

- **MINIMUM PACKAGE SIZES** . . . 2500VA in 14" rack height.
- **INTERCHANGEABLE PLUG-IN OSCILLATORS** . . . 21 standard oscillators are available — to provide fixed or adjustable output frequencies between 45 and 6,000 cps and stabilities to ±0.001%.
- **INSTANTANEOUS OVERLOAD PROTECTION** . . . An overload of any one phase causes complete output shutdown, protecting 3 phase load.
- **DUAL OUTPUT VOLTAGE FOR △ OR Y LOADS** . . . Adjustable voltages 0-125 volts line-to-line as well as 0-217 volts line-to-line are presented at output terminals; output is isolated for maximum versatility.
- **CONSTANT VOLTAGE OUTPUT** . . . 0.5% regulation for no load to full load change — response time less than 50 microseconds.
- **OUTPUT VOLTAGE UNAFFECTED BY UNBALANCED LOADS.**

Plug-in oscillators are Wein bridge or tuning-fork controlled for frequency stabilities ranging between ±0.25% and ±0.001%. Dual output taps are standard for matching either Delta or Wye loads (output may be connected either 120 volts line-to-line or 208 volts line-to-line). Precise amplitude stability and low harmonic content are provided by a combination of positive current feedback and inverse voltage feedback.

The hybrid circuit technique (tubes and transistors) is employed by Kepco in some fifteen high voltage power supplies ranging from 0-200 volts to 0-2500 volts. Power supplies are available in four different classifications, each offering a distinct class of output characteristics ranging from the small (20 watt) ABC-Hybrids, programmable laboratory bench supplies, (5 models) to the sophisticated BHK automatic crossover voltage/current regulators (3 models). Fast slewing capabilities are offered by the BHK models, as well as the unique OPS 2000, a 2000 volt, 10 mA operational amplifier!

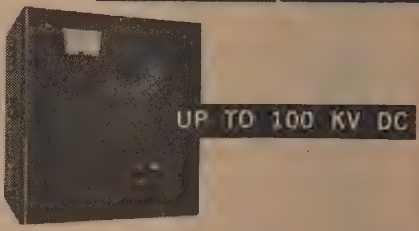
HI-VOLTAGE
DC POWER SUPPLIES

DIGITAL DIALABLE

- Voltage from 2 kilovolts to 150 kilovolts DC
- Power to 40 kilowatts
- 0.05% to 0.1% regulation
- 0.01% ripple
- Fast response

The "BRE" series of precisely regulated high voltage power supplies guarantees regulation accuracy over an adjustment range of 500 volts to rated output, for input line variations and no load to full load changes. Voltage adjustment is in steps of 10 kilovolts, 1 kilovolt, 100 volts, 10 volts, 1 volt and 0-1 volt. The actual voltage output is always within 1% of the dial readings.

GENERAL PURPOSE



Universal Voltronics Corporation general-purpose regulated power supplies provide a continuously adjustable output from zero by means of coarse and vernier controls, with precisely regulated performance at rated output. Availability is up to 100 kilovolts DC, with controls including kilovoltmeter, high voltage pushbuttons and lights and primary line protection.

Power supplies DC regulated

Fluke precision power supplies 0 to 30,220 volts, up to 50 ma output

Fluke high voltage power supplies have long been the standard of the industry when quality and reliability are essential. Fluke HVPS offer high calibration accuracy, tight line-load regulation, fine voltage resolution, excellent long term stability, low temperature coefficient, and freedom from corona, jitter, bounce or overshoot.

Every specification of Fluke power supplies is conservative; customers have found this to be true in thousands of applications and have demonstrated their confidence by specifying Fluke when their voltage demands increase.

Many applications call for high calibration accuracy, while others require high stability and a low ripple component. All are combined with excellent line and load regulation to insure that Fluke power supplies meet or exceed virtually all systems requirements.

Fluke supplies are produced in volume and a large stock is maintained making them readily available and competitively priced.

Typical applications include power BWO's and TWT's, klystrons, photomultiplier tubes, CRT acceleration and focusing, proportional counters, ionization chambers, mass spectrometry, voltmeter and volt box calibration, charging capacitor banks, high-resolution X-ray equipment. They are also extensively used in high voltage research and for component evaluation and test.

Model 407D general purpose power supply

407D

The versatile Model 407D can be used for many laboratory and industrial applications. Prime contributors to all-around usefulness are 0.01% short term stability, 2 mv resolution, precision sampling string, dual bias and filament outputs, tight line and load regulation, and low ripple. For convenience and safety, the main DC output may be removed or applied instantly without disturbing bias or filament outputs. Rack version of this supply is available as Model 407DR.

AMBIENT OPERATING TEMPERATURE: Continuous duty from −20°C to +71°C ambient with corresponding load current ratings for all modes of positions.

STORAGE TEMPERATURE: −55°C to +85°C.

OVERLOAD PROTECTION:

Thermal .... Thermostat; automatic reset when over-temp condition is eliminated.

Electrical:
External Overload Protection .... Fixed, automatic electronic current limiting circuit limits the output current upon external overloads, including short circuit, thereby providing protection for load as well as power supply.

INPUT & OUTPUT CONNECTIONS:

Heavy duty terminal block on rear of chassis.

CONTROLS:

DC output control .... Simple screwdriver voltage adjustment over entire voltage range.

Remote Sensing .. Provision is made for remote sensing to eliminate effect of power output lead resistance on DC regulation.

METERS: Metered panels available as an accessory for use with A, B, C, CC, D, E and EE packages in conjunction with Lambda LRA-3, LRA-4, LRA-5, LRA-6 and LRA-7 Rack Adapters.

Voltmeter and ammeter on metered models of packages F, G and H.

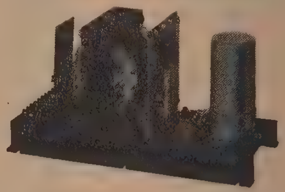
INTEGRATED CIRCUIT POWER SUPPLIES



Designed Specifically for Original Equipment Applications.

THE IC PRODUCT LINE

After a careful analysis of existing power supply product lines, Wanlass Electric concluded that there was an important omission in these lines, namely, the low-cost quality supply for use by OEM's with their integrated circuits. The Wanlass IC line is aimed specifically at this market. This line features a quality series regulator but no frills . . . no expensive package, no unnecessary precision components, 0.25% regulation not 0.05%, 5 millivolts ripple not 1 millivolt, overvoltage protection is available as an option.

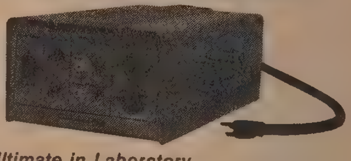
WANLASS PARAX T.M.

TRANSIENT FREE PARAMETRIC POWER



The Ultimate in Laboratory and OEM Power Conversion Equipment.

Parametric Power

If the inductance of a winding can be changed while a current is flowing through that winding, then energy can be transferred. If this change in inductance can be accomplished without the usual use of mutual inductance, then transient free energy transfer can be achieved. By inventing a technique for rhythmically varying the parameters of a magnetic circuit without relying on mutual inductance, Wanlass Electric has discovered an important new way to convert electrical energy. This we have named Parametric Power.

This concept has been translated into a complete line of parametric power conversion products, including: Voltage Regulators, Line Filters, AC Power Supplies, DC Power Supplies, Inverters, DC Converters, and Frequency Converters. All will bear the name PARAX T.M.

THE WANLASS PARAFORMER™

As shown by Equation #1, electromotive force, and hence the transfer of electrical energy can be achieved in two ways: (1) by flux coupling, or (2) by parametric coupling. Existing passive devices such as transformers and ferroresonant transformers depend almost exclusively on the flux coupling term of Equation #1. However, Wanlass Electric has now invented a new component, the Paraformer™, which operates exclusively on the basis of parametric coupling and consequently is a device in which the flux coupling or mutual inductance is zero. (Thus, all energy is passed by the $i\frac{dL}{dt}$ term of Equation #1.)

$$E = \frac{d}{dt}(LI) = \underbrace{\frac{Ldi}{dt}}_{\text{Flux Coupling Term}} + \underbrace{i\frac{dL}{dt}}_{\text{Parametric Coupling Term}}$$

Equation #1

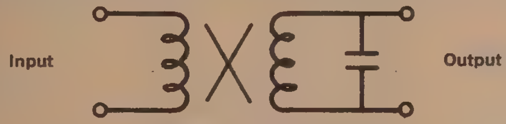
The relative advantages of the new device are summarized in the following table.

TABLE I

	Transformer	Ferroresonant Transformer	Paraformer™
All Passive Device	Yes	Yes	Yes
All Static Device	Yes	Yes	Yes
Number of Components	3 (Two coils & a core)	5 (three coils, a core & a capacitor)	4 (Two coils, a core & a capacitor)
Multiple secondaries permissible	Yes	Yes	Yes
Line Isolation	Yes	Yes	Yes
Voltage Transformation	Yes	Yes	Yes
Line Voltage Regulation	None	±1%	±¼%
Line Filtering (Noise)	No	Slight	Over 50 db attenuation
Load Filtering (Noise)	No	Slight	Over 50 db attenuation
Overload Protection	No	Partial	Yes
Low Line Voltage Protection	None	None	Yes

As will be noted from Table I, the Paraformer™ is inherently a line voltage regulator and line power filter. In fact, the Paraformer's most useful property appears to be its ability to prevent load voltage fluctuations from reaching the line and line voltage fluctuations from reaching the load. As will be noted from the above table, such fluctuations (noise, distortions, etc.) are attenuated by over 50 db for frequencies from a few cycles per second up to 1 megacycle per second..

Having noted the outstanding advantages of the Paraformer™, it is perhaps appropriate to note the simplicity of the device.



Paraformer™ Symbol

Figure 1

As shown in Figure 1 (see also Fig. 2), the Paraformer consists only of a primary winding, a secondary winding, a magnetic core and an AC capacitor. **NO OTHER COMPONENTS** are used. After reviewing the symbol, it is perhaps important to restate that **the Paraformer™ is not a ferroresonant transformer.** The mechanism for energy transfer is entirely different and most of the basic characteristics are entirely different. Table II highlights some of these differences.

Relative to Table II, the test results observed for the Paraformer are most easily understood if one thinks of this device as a power oscillator which is parametrically pumped by the line and hence is phase locked to the line frequency. (For instance, shorting the output of any oscillator causes the oscillations to stop, thus accounting for the results observed in Test #1).

TABLE II

TEST	OBSERVATIONS		
	Transformer	Ferroresonant Transformer	Paraformer™
1. Short circuit output terminals	High load currents	Twice rated load current	Zero load current
2. Remove output capacitor		Output voltage decreases by 25%	Output voltage goes to zero
3. Apply low input voltage (e.g. 50% of normal)	Low output voltage (e.g. 50%)	Low output voltage (e.g. 50%)	Output voltage goes to zero
4. Apply voltage to output terminals instead of input terminals	Bilateral Operation (Voltage observed on input terminals)	Bilaterial Operation (Voltage observed on input terminals)	Unilateral Operation (no voltage observed at input terminals)
5. Measure phase shift through device	Constant at 180°	Highly variable (varies with load)	Constant at 90°

Figure #2 depicts the design of one version of the Wanlass Paraformer™ (two C—Cores rotated 90°).

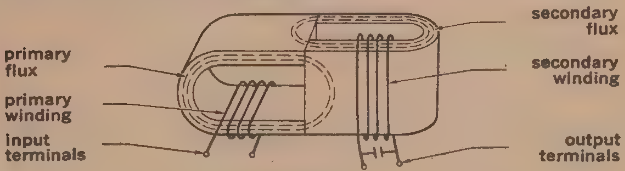


Figure #2

Note that the geometry is such that the primary flux does not link the secondary winding and that the secondary flux does not link the primary winding. (Accordingly, the classical flux coupling is zero). However, note that the primary flux does modulate the reluctance associated with the secondary flux, and hence the primary does modulate the inductance of the secondary. This modulation can be achieved only by transferring electrical power from the primary to the secondary. This power in turn sustains the secondary oscillations and delivers power to the load. It is this unique parametric power transfer mechanism that makes the Paraformer™ a revolutionary new component.

ORDER A PARAFORMER™ TODAY AND SEE FOR YOURSELF

Knowing that every conceptually new component must be carefully tested by prospective users before it can be included within their own equipment, Wanlass Electric has available for immediate delivery a 60 watt Paraformer (Model PEC—60). May we suggest that you buy one of these units and satisfy yourself relative to its amazing properties. When you place your order, be sure to ask for our new book entitled "The Wanlass Paraformer™". This treatise on the subject of parametric power conversion discusses the theory and application of parametric devices and will assist you in evaluating your PEC—60.

HIGH VOLTAGE
AND
NUCLEAR INSTRUMENTATION POWER SOURCES

HIGH VOLTAGE HYBRID rack mounted precision power sources utilizing all silicon solid state circuitry and a vacuum tube pass element. Voltage ranges available to 10 KV and current ranges to 40 MA. This series features low noise and ripple, 0.25% calibration accuracy and a stability of 0.005%/hour. These models are ideally suited for photomultiplier amplifiers, radiation monitors and applications requiring a precise high voltage dc source.

HIGH VOLTAGE ALL SOLID STATE power sources which furnish stable, noise free voltages for the operation of high resolution CRT display systems, electron beam microscopes and similar devices. Extensive use of epoxy encapsulation techniques allows a remarkable reduction in size as well as effective environmental isolation. The Models 1584 and 1579 have an output of 1 KV to 20 KV at 3 MA and 10 KV to 30 KV at 1 MA, respectively. They feature a stability of 0.01%/hr, calibration accuracy of 0.25%, ripple of 250 MV P-P and regulation of 0.0025%.

NUCLEAR INSTRUMENTATION MODULES* (NIM System) provide power supplies conforming to AEC Report TID 20893. Multi-output rear mounting AEC-320-3 (shown in photo) complimented by modules specifically designed for photomultiplier tubes, solid state detectors and digital integrated circuits.

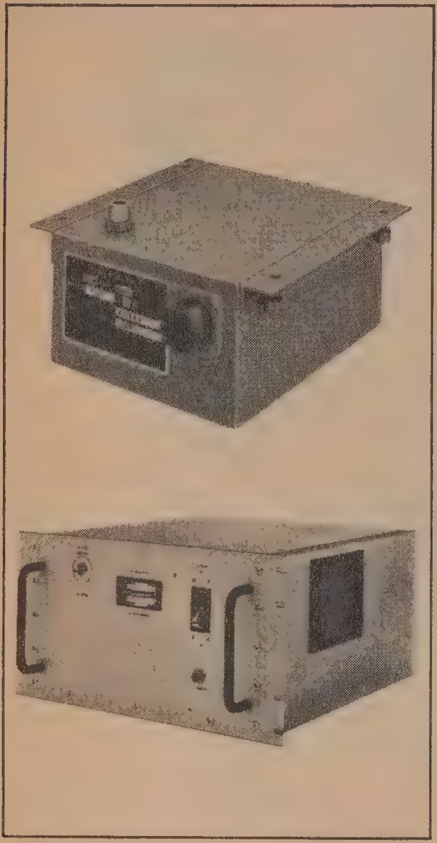
TUNG-SOL®

Solid State Power Supplies



The Tung-Sol power supply is a unique combination of precise performance and ultimate efficiency achieved at minimal cost.

Few power supply manufacturers can equal Tung-Sol in engineering experience and production and test facilities. No other producer of custom power supplies makes so many of the major components under one roof.

Because Tung-Sol is not dependent on vendors for the more critical parts, production schedules, product performance and reliability are not limited by commercial standards.

Tung-Sol engineers are qualified to aid systems engineers in determining the electrical specifications and mechanical design that will provide optimum performance at lowest cost. Tung-Sol custom power supplies are tailor-made for the specific application without need for compromising system parameters. Usually, they cost no more than off-the-shelf supplies—often, they cost less. Write for Bulletin T-361.

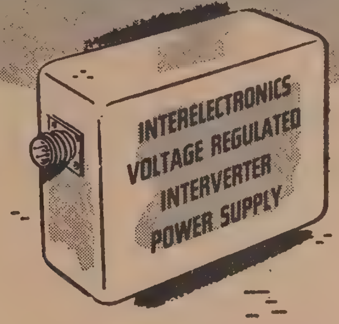
PROVEN RELIABILITY—

DC-DC, DC-AC, SOLID-STATE POWER INVERTERS

over 260,000 logged hours— voltage-regulated, frequency-controlled, for missile, telemeter, ground-support, 135°C all-silicon units available now—



Interelectronics all-silicon thyratron-like gating elements and cubic-grain toroidal magnetic components convert DC to any desired number of AC or DC outputs from 1 to 10,000 watts.

Ultra-reliable in operation (over 260,000 logged hours), no moving parts, unharmed by shorting output or reversing input polarity. High conversion efficiency (to 92%, including voltage regulation by Interelectronics patented reflex high-efficiency magnetic amplifier circuitry).

Wide input voltage range (1 to 250 volts DC). Wide input voltage regulation (output voltage maintained with variations up to 50% in input voltage).

Light weight (to 6 watts/oz.), compact (to 8 watts/cu. in.), low ripple (to 0.01 mv. p-p), excellent voltage regulation (to 0.1%), precise frequency control (to 0.2%) with Interelectronics extreme environment magnetostrictive standards or to 0.0001% with fork or piezoelectric standards.

Complies with MIL specs. for shock (100G 11 misc.), acceleration (100G 15 min.), vibration (100G 5 to 5,000 cps.), temperature (to 150 degrees C), RF noise (I-26600).

AC single and polyphase units supply sine waveform output (to 2% harmonics), will deliver up to ten times rated line current into a short circuit to actuate MIL type magnetic circuit breakers or fuses, will start gyros and motors with starting current surges up to ten times normal operating line current.

Now in use in major missiles, powering telemeter transmitters, radar beacons, electronic equipment. Single and polyphase units now power airborne and marine missile gyros, synchros, servos, magnetic amplifiers.

Interelectronics—first and most experienced in the solid-state power supply field produces its own all-silicon solid-state gating elements, all high flux density magnetic components, high temperature ultra-reliable film capacitors and components, has complete facilities and know how—has designed and delivered more working KVA than any other firm!
